

# **TABLE OF CONTENTS**

<b>Abbreviations</b>	<b>5</b>
<b>Summary</b>	<b>7</b>
<b>Résumé</b>	<b>9</b>
<b>Chapter I. Introduction</b>	<b>11</b>
I. The vascular system	11
I.1. Architecture of mature blood vessels	11
I.2. Origin of the vascular system	13
II. The vessel wall, a tightly controlled permeable tissue	17
II.1. The endothelium, a semi-permeable barrier	17
II.1.1. The paracellular transport pathway	18
II.1.2. The transcellular transport pathway	21
II.2. Permeability-increasing mediators	23
II.2.1. VEGF	24
II.2.2. Histamine	25
II.2.3. Thrombin	25
II.3. Signaling pathways stimulating vascular permeability	26
II.3.1. Initial targets of permeability inducers	26
II.3.2. Downstream targets of permeability inducers	28
II.3.3. Final targets and effectors of vascular permeability	28
II.4 Vasodilatation	30
III. Vascular involvement in hypersensitivity reactions	33
III.1. Anaphylaxis	34
III.2. Delayed type hypersensitivity	35
IV. Peroxisome proliferator activated receptors - PPARs	37
IV.1. PPARs, structure and function	37
IV.2 Mechanisms of action	39
IV.3 PPARs, important players in vascular functions and inflammation	40
<b>Chapter II. Aim of the work</b>	<b>45</b>
<b>Chapter III. Results</b>	<b>47</b>
I. Exploration of the role of PPAR $\beta/\delta$ in endothelial cells and angiogenesis	47

I.1. PPAR $\beta/\delta$ activation induces endothelial cell sprouting	47
I.2. PPAR $\beta/\delta$ activation induces VEGF-A expression <i>in vitro</i>	49
II. Exploration of the role of PPAR $\beta/\delta$ in acute vascular hyperpermeability	53
II.1. VEGF-induced acute vascular hyperpermeability is impaired in the absence of PAR $\beta/\delta$	53
II.2. The absence of PAR $\beta/\delta$ in the PAR $\beta/\delta$ -null mice does not affect dermal vessel density nor the morphology	57
II.3. The absence of acute vascular hyperpermeability of dermal microvessels in PAR $\beta/\delta$ -null mice is not VEGF-A-specific	59
III. Exploration of the role of endothelial PPAR $\beta/\delta$ in induced acute vascular hyperpermeability	61
IV. Intracellular signaling pathways involved in endothelial permeability	67
IV.1. Expression patterns of permeability important players	67
IV.2. The absence of PPAR $\beta/\delta$ reduces cell-cell junction dynamics	71
V. PPAR $\beta/\delta$ regulation of vessel permeability impacts on the pathophysiological situations	73
V.1. PPAR $\beta/\delta$ -dependent edema formation in delayed-type hypersensitivity reaction	73
V.2. The absence of PPAR $\beta/\delta$ attenuates IgE-mediated systemic anaphylaxis <i>in vivo</i>	77
VI. Conclusions	81
<b>Chapter IV. Discussion and future perspectives</b>	<b>83</b>
<b>Chapter V. Materials and methods</b>	<b>95</b>
<b>Chapter VI. References</b>	<b>103</b>
<b>Acknowledgements</b>	<b>121</b>
<b>Annex</b>	<b>123</b>
