Abstract (English/Français)	v
Acknowledgements	ix
1 Introduction	1
1.1 Stem cells	1
1.1.1 Tissue homeostasis	1
1.1.2 Stem cells and stem cell potency	1
1.1.3 Stem cell properties	4
1.1.4 Stem cell fate	6
1.1.5 The stem cell niche	6
1.1.6 Cell replacement therapy	8
1.2 The skin model system	15
1.2.1 Anatomy of the skin	15
1.2.2 Homeostasis of the epidermis	16
1.2.3 Epidermal stem cell culture	17
1.2.4 Epidermal stem cell therapy	18
2 Aims	23
3 Part 1: Cultured epidermal stem cell engraftment <i>in vivo</i>	25
3.1 Introduction to the pig model system	25
3.2 Regeneration of an epidermis by CEA on full thickness skin wounds	30
3.3 Behavior of transplanted clonogenic keratinocytes	37
3.4 Discussion and perspectives	39
4 Part 2: <i>In vitro</i> behavior of epidermal stem cells	47
4.1 Development of a live cell imaging system to study fate choices	47
4.1.1 Requirements	47
4.1.2 Strategies to score cell behavior in time-lapse movies	54
4.2 Observation of epidermal stem cells in culture	58
4.2.1 Mass culture	59
	xi

Contents

4.2.2	Single cells culture	62
4.3	Impact of the cell cycle on keratinocytes fate choices	68
4.3.1	Engineering of keratinocytes expressing FUCCI	69
4.3.2	Clonogenicity of pig keratinocytes	70
4.4	Impact of modified culture conditions on fate choices	77
4.4.1	Human keratinocytes in mass culture	77
4.4.2	Keratinocytes in single cell culture	81
4.4.3	Effect of ROCK inhibition on the growth potential	83
4.5	Discussion and perspectives	86
5	Conclusions	93
6	Material & methods	95
6.1	Animals	95
6.2	Biopsy processing	98
6.3	Cell culture	100
6.4	Cell engineering	102
6.5	Live cell imaging (LCI)	104
A	Appendix	107
	Bibliography	115
	Curriculum Vitae	127
