Abstract	iii
Zusammenfassung	v
1 Introduction	1
1.1 Motivation	1
1.2 Formation of cirrus clouds	2
1.2.1 Homogeneous freezing	3
1.2.2 Heterogeneous nucleation	4
1.2.3 Competition of homogeneous and heterogeneous nucleation	5
1.3 Geo-engineering	7
1.3.1 Stratospheric aerosols	9
1.3.2 Thinning of cirrus clouds	11
1.4 Outline of thesis	12
2 Model description	13
2.1 ECHAM5-HAM	13
2.2 Reference cirrus scheme	14
2.3 New cirrus scheme	17
2.3.1 Multi modal ice formation	19
2.3.2 Multi modal depositional growth	23
2.3.3 Heterogeneous nucleation of pure and coated mineral dust aerosols	24
3 Dust ice nuclei effects on cirrus clouds	27
3.1 Introduction	28
3.2 Model description	30
3.2.1 ECHAM5-HAM	30
3.2.2 New cirrus scheme	31
3.2.3 Set up of simulations	37
3.3 Results Part I	38
3.3.1 Role of homogeneous versus heterogeneous nucleation	38
3.3.2 Climatic effects	44
3.4 Results Part II	49
3.4.1 Comparison with observations	49
3.5 Results Part III	54
3.5.1 Sensitivity study of heterogeneous freezing	54
3.6 Conclusions	58
4 Effects of stratospheric sulphate aerosol Geo-engineering on cirrus clouds	61
4.1 Introduction	62
4.2 Model description	63
4.3 Results and Discussion	64
4.4 Conclusions	68
4.5 Acknowledgements	69
5 Long-term response of Geo-engineering on cirrus clouds	71

5.1	Introduction	71
5.2	Model description	73
5.2.1	ECHAM5-HAM	73
5.2.2	MLO	74
5.2.3	Simulations	74
5.3	Results and Discussion	75
5.3.1	Impact on surface temperature	75
5.3.2	Impact on precipitation and hydrological sensitivity	78
5.4	Conclusions	80
6	Thinning of cirrus clouds	83
6.1	Introduction	83
6.2	Model description	84
6.2.1	ECHAM5-HAM	84
6.2.2	Simulations	86
6.3	Results	86
6.4	Conclusions	89
7	Summary and outlook	91
7.1	Summary	91
7.2	Outlook	94
	List of Symbols and Abbreviations	97
	List of Figures	101
	List of Tables	103
	Bibliography	105
	Acknowledgements	115
	Curriculum Vitae	117
