

SUMMARY	5
Résumé	7
ABBREVIATIONS.....	10
INTRODUCTION.....	12
I. Host-pathogen interactions	12
1. A definition of Virulence.....	12
2. Bacterial pathogenesis	13
3. Host-mediated pathogenesis	14
4. Strategies to survive microbial infection: Resistance, Tolerance and Avoidance	14
II The Drosophila Immune System.....	17
1. The Drosophila Systemic immune response.....	18
1.1 The systemic production of antimicrobial peptides	18
1.2 Melanization	20
1.3 The Cellular Immune Response	21
2. The Gut Immune Response	22
2.4 Epithelial homeostasis maintenance by stem cells	25
3. Model bacteria to study gut immunity.....	26
3.1 <i>Erwinia carotovora carotovora</i> 15.....	26
3.2 <i>Pseudomonas entomophila</i>	27
IV. The Regulation of translation	28
1. Translation initiation in eukaryotes	29
1.1 Structure of ribosome	29
1.2 Initiation factors of translation	29
1.3 Regulation of translation initiation.....	30
2. Pathways regulating translation initiation in response to various environmental stresses	32
2.1 Translation control by phosphorylation of eIF2 α	32
2.2 Regulation of S6e and 4E-BPs by the TOR pathway.....	33

3. Infection and its effect on host translation35

IV The p38 Mitogen-Activated Protein Kinase pathway and Immunity ...36

1. Mammalian p38 pathway and implication in disease36

2. The p38 signaling cascade in invertebrate immunity37

2.1 The role of p38 in *C. elegans*37

2.2 The role of p38 in *Drosophila* immunity38

V. Rationale of the project41

RESULTS.....42

Chapter I. Translation inhibition based mechanisms cause disruption of gut immune response by an entomopathogen.43

Summary of results43

Manuscript.....45

Supplementary Figures56

Supplementary Experimental Procedures62

Chapter II. Contribution of the MAPK p38c to intestinal immunity and lipid homeostasis68

Introduction.....68

Results.....70

Discussion.....73

Experimental Procedures74

Figures.....77

Discussion and Perspectives84

I. What makes *P. entomophila* pathogenic to *Drosophila*?84

II. The inhibition of translation is central to *P. entomophila* pathogenesis.....86

III. Host translation and innate immunity89

IV. The role of p38 MAPKs in pathogenesis to oral infection91

Appendix.....94

1. Invasive and indigenous microbiota impact intestinal stem cell activity through multiple pathways in Drosophila.....94

Background.....94

Results and my contribution95

Discussion.....96

Manuscript.....99

2. Autocrine and paracrine Unpaired signaling regulate Intestinal Stem Cell maintenance and division.....120

Background.....120

Results and my contribution120

Discussion.....122

Manuscript.....125

Bibliography145

Acknowledgements156

CURRICULUM VITAE.....157
