REMERCIEMENTS	1
ABSTRACT	6
RÉSUMÉ	8
LIST OF FIGURES	10
LIST OF TABLES	15
LIST OF ABBREVIATIONS	16
1. Introduction	19
1.1 <i>Mycobacterium tuberculosis</i>	19
1.2 Phosphorus	24
1.3 The Pst system	25
1.4 Organization of the Pst locus in <i>M. tuberculosis</i> and <i>M. smegmatis</i>: similarities and differences	27
1.5 The Pst system and bacterial virulence	29
1.6 Polyphosphate	30
1.7 PolyP metabolism	32
1.7.1 Polyphosphate kinase 1 (PPK1).....	32
1.7.2 Polyphosphate kinase 2 (PPK2).....	34
1.7.3 Exopolyphosphatase (PPX).....	34
1.7.4 Endopolyphosphatase (PPN)	35
1.7.5 Polyphosphate glucokinase (PPGK)	35
1.8 Polyphosphate in mycobacteria	36
1.9 The stringent response in bacteria	38
1.10 Polyphosphate accumulating organisms (PAOs): application to phosphorus recovery and industrial bioprocesses	40
2. Project description and overall goals	43
3. Experimental Results and Discussion	49
3.1 Effect of the phosphate concentration on the growth kinetics of <i>M. smegmatis</i>	49
3.2 Characterization of a ΔpstA deletion mutant of <i>M. smegmatis</i>	50
3.3 Effect of the Pi concentration on the growth kinetics of the <i>M. smegmatis</i> ΔpstA mutant	52
3.4 Characterization of Δppk1 deletions in <i>M. smegmatis</i>	65
3.5 Understanding the role of PPK1 and/or PolyP in the regulation of the PHO regulon genes	74

3.5.1	Analysis of the PHO regulon induction in the <i>Δppk1</i> mutant during Pi starvation	75
3.5.2	Determination of the mRNA half life of the PHO regulon genes	76
3.5.3	Conclusions	78
3.6	Understanding the mechanism of PolyP accumulation in the <i>M. smegmatis ΔpstA</i> mutant.....	78
3.6.1	Analysis of the <i>ppk1</i> regulation and expression in <i>M. smegmatis</i>	79
3.6.2	Characterization of a <i>ΔrelA</i> deletion mutant of <i>M. smegmatis</i>	83
3.6.3	Deletion of the other phosphate transport systems	86
3.6.4	Conclusions	89
3.7	Understanding the mechanism of PolyP degradation during Pi starvation in the <i>M. smegmatis ΔpstA</i> mutant.....	89
3.7.1	Characterization of <i>Δppx</i> deletion mutants of <i>M. smegmatis</i>	90
3.7.2	Characterization of a <i>Δppk2</i> deletion mutant of <i>M. smegmatis</i>	92
3.7.3	Construction of <i>M. smegmatis</i> PPK1 point mutants	94
3.7.4	Conclusions and discussion	100
3.8	Understanding the mechanism of stress sensitivity of the <i>ΔpstA</i> mutant.....	101
3.8.1	Analysis of the survival of the <i>M. smegmatis ΔpstA</i> mutant using cell wall targeting antibiotics	102
3.8.2	Analysis of the survival of the <i>M. smegmatis ΔpstA</i> mutant using antibiotics that do not target the cell wall.....	106
3.8.3	Conclusions	107
3.9	Analysis of a <i>M. tuberculosis ΔpstA</i> deletion mutant.....	110
3.9.1	Analysis of the growth kinetics during Pi starvation.....	110
3.9.2	PolyP quantification	111
3.9.3	Analysis of cell measurements	112
4.	Comparative analysis of the regulation of the <i>pst</i> locus in fast- and slow-growing mycobacteria	119
4.1	Validation of the <i>pstA-dest_gfp</i> transcriptional reporter strains ..	120
4.1.1	Validation by growth curves	120
4.1.2	Validation by qRT-PCR.....	122
4.2	Analysis of the expression of the Pst operon in high Pi condition	125
4.2.1	Quantification by qRT-PCR	126
4.2.2	Quantification by Western blot	128
4.2.3	Quantification by flow cytometry.....	129
4.3	Analysis of the induction of the Pst operon during Pi starvation .	132
4.3.1	Quantification by qRT-PCR	132
4.3.2	Quantification by western blot.....	134
4.3.3	Quantification by flow cytometry.....	136
4.3.4	Summary	139
4.3.5	Microfluidics experiments.....	140
4.4	Conclusions.....	143
4.5	Localization of the Pst system in <i>M. smegmatis</i> living cells using a <i>pstA::gfp</i> translational reporter.....	146
4.6	Models for the regulation of the PHO regulon	147

5. Conclusions and Perspectives.....	155
6. Materials and Methods.....	163
6.1 Bacterial strains and culture conditions	163
6.2 Growth Curves.....	163
6.3 Cloning of deletions and transcriptional reporters.....	164
6.4 Complementation of deletions	164
6.5 Extraction of genomic DNA.....	165
6.6 Southern hybridization.....	165
6.7 <i>In vitro</i> stress sensitivity experiments.....	165
6.8 Kill curves.....	166
6.9 MIC measurements.....	166
6.10 Polyphosphate extraction and quantification.....	166
6.11 Alkaline phosphatase detection	167
6.12 RNA extraction, cDNA synthesis and qRT-PCR	167
6.13 Determination of mRNA half-life.....	168
6.14 Preparation of cell lysates	168
6.15 Western Blot.....	169
6.16 Flow cytometry.....	170
6.17 Time-lapse fluorescence microscopy	170
6.18 DAPI staining of PoyP in living bacteria in the microfluidics device ...	170
6.19 ATP measurements.....	171
6.20 Analysis of PDIM production.....	171
Appendix	173
Analysis of PDIM production in the <i>M. tuberculosis</i> transcriptional reporters	174
List of primers used for cloning	174
List of primers for gene expression analysis by qRT-PCR.....	179
References Cited	181
Curriculum Vitae.....	197
