

## TABLE OF CONTENTS

<b>Abstract</b>	ii
<b>1. Introduction</b>	1
<b>1.1. Epidermal structure and function</b>	1
1.1.1 Epidermal stratification	1
<b>1.2. Structure and function of epidermal junctions</b>	3
1.2.1 Hemidesmosomes and Focal adhesions	3
1.2.2. Adherens junctions	4
1.2.3. Desmosomes	5
<b>1.3. Regulation of epidermal homeostasis</b>	7
1.3.1. EGFR signaling in keratinocytes	8
1.3.1. A. EGFR family members and mode of activation	9
1.3.1. B EGFR-mediated signaling in skin	10
<b>1.4. Cadherin–mediating signaling in epithelial cells</b>	12
1.4.1. Indirect evidence for cadherin-signaling from mouse models	13
1.4.2. Evidence for E-cadherin/EGFR signaling with a direct route to the nucleus at onset of keratinocyte differentiation	14
<b>1.5. Desmosomal cadherin-mediated signaling and <i>Pemphigus vulgaris</i></b>	18
<b>1.6. Aims and working hypothesis</b>	20
<b>1.7. References</b>	22
<b>2. Results</b>	29
2.1. Paper 1: An Adult Passive Transfer Mouse Model to Study Desmoglein 3 Signaling in Pemphigus Vulgaris	30
2.2. Manuscript 1: Desmoglein 3 interacts with EGFR in differentiating keratinocytes and epidermis and modulates its mitotic activity	31
2.3. Manuscript 2: The extent of EGFR inhibition defines therapy Efficiency in Pemphigus vulgaris	32
<b>3. Discussion, relevance of my study and outlook</b>	33
<b>Curriculum vitae</b>	iii
