Abstract (English/German)	v
Abbreviations	ix
Introduction	1
1 Theoretical and experimental basics	9
1.1 Scanning tunneling microscopy	9
1.2 Sample and tip preparation	12
1.3 Electrospray ion beam deposition	14
2 Realization of a new 5 K scanning tunneling microscope	17
2.1 Design, construction and setup	17
2.1.1 UHV system	17
2.1.2 Helium cryostat	19
2.1.3 STM unit	19
2.1.4 System components	24
2.2 System performance	27
3 Patterning and functionalization of metal surfaces	29
3.1 Highly adaptable 2D-MOCNs	29
3.1.1 BDBA on Cu(100), Ag(100) and Au(111)	30
3.1.2 BDBA-MOCNs on Au(111) and Ag(100)	32
3.2 Functionalization of 2D-MOCNs	44
3.2.1 Ni decoration of Fe-BDBA on Au(111)	45
3.2.2 Ni decoration of Fe-BDBA on Ag(100)	47
3.2.3 Ni deposition on bare Ag(100)	49
3.2.4 Binding guest molecules into Ni-functionalized cavities on Ag(100)	50
3.2.5 Ni-BDBA networks	55

4 Resolving the molecule-oxide interface of DSSCs	59
4.1 Scientific background	60
4.1.1 Dye-sensitized solar cells	60
4.1.2 TiO ₂ anatase substrate	62
4.1.3 Carboxylate groups on metal oxides	65
4.2 Preparation of atomically well-defined TiO ₂ anatase (101)	66
4.2.1 Natural TiO ₂ anatase single bulk crystal	66
4.2.2 STM characterization	67
4.2.3 STS investigation	70
4.3 Photosensitizer N3 on TiO ₂ anatase (101)	72
4.3.1 Electrospray ion beam deposition of intact N3	73
4.3.2 Mobility and formation of dye assemblies	76
4.3.3 Multi-conformational binding geometries	78
4.3.4 Supramolecular interaction	81
4.3.5 N3 charge injection potentials	82
4.3.6 Monolayer of N3	84
4.4 Dye anchoring ligand BINA on TiO ₂ anatase (101)	87
4.5 Photosensitizer N3 on Au(111)	93
Conclusions and Perspectives	97
Bibliography	105
Acknowledgements	121
Curriculum Vitae	123
Publications	125
