ABSTRACT	3
RESUMÉ	5
LIST OF ABBREVIATIONS	7
CONTENT	9
1. INTRODUCTION	13
1.1. Low temperature plasticity of bcc metals	13
1.1.1. Slip in the bcc structure	13
1.1.2. Temperature and orientation dependence	14
1.1.3. Effect of impurity content and alloying	19
1.1.4. Core of a screw dislocation	20
1.2. Plasticity of bcc metals in confined volumes	24
1.2.1. Introduction on “size effect”, a feature of testing in confined volume	24
1.2.2. Parameters influencing the mechanical response when testing micro-pillars	25
1.2.3. Review of bcc metals deformed in confined volume	28
1.2.4. Intrinsic dislocations dynamics in confined volume	29
1.3. Objectives of this investigation	31
2. EXPERIMENTAL AND TECHNICAL ASPECTS	33
2.1. Micro-compression machine	33
2.2. Micro-compression experiment	35
2.2.1. Tip-sample alignment	35
2.2.2. Touch-down procedure	35
2.2.3. Compression	36
2.2.4. Mechanical results	36
2.3. In-situ micro-compression experiment	37
2.3.1. Setup	37
2.3.2. MicroXAS beamline and concerns related to the white beam	39
2.3.3. In-situ micro-compression procedure	43
2.4. Correlation between Laue and microstructure	46
2.4.1. Principle of Bragg’s law and Laue diffraction	46
2.4.2. Laue pattern indexation routine	47
2.4.3. Collective peak movements	48
2.4.4. Peak shape	50
2.5. Material description	52
2.5.1. Sample geometry constraints due to in-situ testing	52

2.5.2.	Mo-alloys pillars prepared from a MoNiAl composite.....	53
2.5.3.	Bcc pillars (W, Mo, Nb).....	58
3.	RESULTS	65
3.1.	Mo-alloys pillars	65
3.1.1.	List of the samples with details	65
3.1.2.	Initial microstructure.....	66
3.1.3.	In-situ results	67
3.1.4.	Mechanical behavior and post-mortem analysis.....	68
3.2.	Tungsten pillars – [1 5 5] and [2 5 6] orientations	70
3.2.1.	List of the samples with details	70
3.2.2.	Initial microstructure.....	72
3.2.3.	In situ results for [1 5 5] orientation.....	73
3.2.4.	In situ results for [2 5 6] orientation.....	85
3.3.	Tungsten pillars – [1 5 10] orientation	95
3.3.1.	List of samples.....	95
3.3.2.	Initial microstructure from Laue measurements	96
3.3.1.	In-situ mechanical results	97
3.4.	Other BCC single crystals: Mo and Nb with an orientation along $\sim[1\ 5\ 5]$	111
3.4.1.	List of the samples with details	111
3.4.2.	Initial microstructure.....	112
3.4.3.	In-situ results for Mo	114
3.4.4.	Ex-situ results for Mo	118
3.4.5.	In-situ results for Nb.....	122
3.5.	Other BCC single crystals: Mo and Nb with an orientation along $\sim[1\ 5\ 10]$	129
3.5.1.	List of the samples with details	129
3.5.2.	Initial microstructure.....	130
3.5.3.	In-situ results for Mo	131
3.5.4.	In-situ results for Nb.....	134
4.	DISCUSSION	139
4.1.	Elementary steps on {110} planes.....	139
4.2.	Observation of anomalous slip	143
4.3.	Relation between the slip traces and the activated slip systems followed with Laue diffraction.....	148
4.3.1.	Slip traces produced before and during strain burst	148
4.3.2.	Double slip considering Laue data, single slip looking at slip traces	149
4.4.	Influence of the critical temperature on the plasticity	151
4.4.1.	Influence of T_c on the elementary slip on {110}.....	151
4.4.2.	Influence of T_c on the slip traces	153
4.5.	Geometry influence	155

4.5.1. Same compression axis but different orientation of the side faces in a square pillar of W	155
4.5.2. Square versus rectangle geometry with Mo pillars	157
4.5.3. Effect of the geometry of pillar top (concave or flat) on mechanical behavior	163
4.6. Microstructure of FIBed pillars	167
4.7. Mechanical summary	171
SUMMARY	175
BIBLIOGRAPHY	177
ACKNOWLEDGEMENTS	185
CURRICULUM VITAE	187
