

Table of Content

1 Introduction	1
1.1 Ruthenium Cyclopentadienyl Complexes	3
1.1.1 Introduction	3
1.1.2 Cyclopentadienyl (Cp) Ruthenium Complexes	4
1.1.3 Pentamethylcyclopentadienyl (Cp*) Ruthenium Complexes	7
1.1.4 The Sterically Demanding Cp [^] Ligand.....	10
1.2 The Ruthenium-Catalysed Atom-Transfer Radical Addition Reaction.....	17
1.2.1 Introduction.....	17
1.2.2 Transition Metal-Catalysed ATRA.....	19
1.2.3 The Use of Reducing Agents	21
1.2.4 Sequential Reactions Involving ATRA	23
1.3 The Ruthenium-Catalysed Azide-Alkyne Cycloaddition Reaction.....	26
1.3.1 Click Chemistry	26
1.3.2 The 1,3-Dipolar Cycloaddition Reaction	27
2 Reactivity of Cp[^]Ru Complexes Towards Azides	29
2.1 Cycloaddition of Azides and Alkynes	31
2.2 Transformation of Azides into 1,3,5-Triaryl-2,4-diazapenta-1,4-dienes.....	35
2.2.1 Introduction	35
2.2.2 Catalyst Screening	36
2.2.3 Scope of the Reaction.....	38
2.2.4 Study of the Mechanism.....	41
2.3 Synthesis of a Cp [^] Ru(IV) Imido Complex.....	46
2.4 Conclusion	49
3 Microwave Synthesis of Chloro-Bridged Dimers.....	51
3.1 Introduction	53
3.2 Results.....	53
3.3 Conclusion.....	57
4 Synthesis of Novel Cp[^] Ruthenium Complexes.....	59
4.1 Bridging Alkylidene Complexes	61
4.1.1 Introduction	61

4.1.2	Reaction of $[\text{Cp}^*\text{RuCl}_2]_2$ and $[\text{Cp}^*\text{RuCl}_2]_2$ with $\text{N}_2\text{CHSiMe}_3$	63
4.1.3	Catalytic Activity of the New Bridging Alkylidene Complex	66
4.2	Nitrosyl Complexes of Cp^*Ru	68
4.3	The Quest for $\text{Cp}^*\text{Ru(I)}$ Complexes	71
4.3.1	Introduction	71
4.3.2	Reduction with Metallic Sodium and Sodium Naphthalenide	73
4.3.3	Reduction in the Presence of Carbon Monoxide	77
4.3.4	Reduction in the Presence of Triphenylphosphine	81
4.3.5	Other Reductions	86
4.4	Conclusion	91
5	Developments in the Sequential ATRA/ Dehalogenation Process	93
5.1	Introduction	95
5.2	Synthesis of Trifluoromethyl-Substituted Cyclopropanes	95
5.2.1	Introduction	95
5.2.2	Halothane as $-\text{CF}_3$ Source	96
5.2.3	Substrates Scope	99
5.2.4	Conclusion	102
5.3	N-Vinylphthalimide and N-Vinyl-2-Pyrrolidone as Substrates for ATRA/Dehalogenation Reactions	102
5.4	Other $-\text{CF}_3$ Containing Substrates: Attempts to Increase the Size of the Ring	103
5.4.1	Introduction	103
5.4.2	Reaction Conditions	104
5.4.3	1,2-Dibromo-3,3,3-trifluoropropane	105
5.4.4	2,3-Dibromooctafluorobutane	105
5.4.5	1,2-Dibromohexafluoropropane	106
5.5	Conclusion	110
6	Summary and Conclusions	111
7	Experimental Section	115
7.1	General and Instrumentation	117
7.1.1	General	117
7.1.2	Commercial Chemicals	117
7.1.3	Instrumentation	118
7.2	Synthesis and Characterisation of Complexes	120

7.3	Catalysis	128
7.3.1	Synthesis of 1,3,5-Triaryl-2,4-diazapenta-1,4-dienes	128
7.3.2	Catalytic Conversion of Azides into Aldehydes.....	130
7.3.3	Catalytic Addition of $N_2CHSiMe_3$ to Phenylacetylene.....	131
7.3.4	Trifluoromethyl-Substituted Cyclopropanes	131
7.3.5	ATRA Reactions with 1,2-Dibromohexafluoropropane	136
8	Appendix	139
9	References.....	147
