<b>Abstract (English/Français/Italiano)</b>	<b>v</b>
<b>Introduction</b>	<b>1</b>
<b>1 Exciton-Polaritons in Microcavities and their condensation</b>	<b>7</b>
1.1 Photons in a microcavity . . . . .	7
1.1.1 Photons in two-dimensions . . . . .	11
1.2 Excitons in semiconductors . . . . .	12
1.3 Quantum-well excitons . . . . .	14
1.4 Exciton spin . . . . .	16
1.5 Light-matter coupling: bulk and confined case . . . . .	18
1.6 Semiconductor microcavities: the strong coupling regime . . . . .	19
1.6.1 Measurement with polaritons . . . . .	22
1.6.2 Polarization of polaritons . . . . .	24
1.6.3 Microcavities and polarization . . . . .	26
1.7 Polaritons and Bose-Einstein condensation . . . . .	28
1.7.1 Bose-Einstein condensation in a nutshell . . . . .	28
1.7.2 Exciton-polaritons condensation . . . . .	30
1.7.3 Comment on the boson nature of polaritons . . . . .	30
1.8 Theoretical modeling: mean-field approach . . . . .	31
1.9 State of the art . . . . .	33
<b>2 Sample and measurement techniques</b>	<b>37</b>
2.1 The sample . . . . .	37
2.2 Experimental apparatus . . . . .	41
2.2.1 Excitation lasers . . . . .	41
2.2.2 Features of the excitation setup . . . . .	42
2.2.3 Detection instrumentation . . . . .	44
2.3 Overview of experimental methods . . . . .	45

2.3.1	General interferometric scheme . . . . .	45
2.3.2	Active stabilization for coherence measurements . . . . .	47
2.3.3	Computer-controlled tomography . . . . .	49
2.4	Data treatment algorithms . . . . .	50
2.4.1	Determining the first-order coherence function . . . . .	50
2.4.2	Digital off-axis holography . . . . .	51
<b>3</b>	<b>Polariton condensates in one dimension</b>	<b>57</b>
3.1	Overview . . . . .	58
3.2	Experimental setup . . . . .	59
3.3	Assessment of 1D condensates . . . . .	61
3.4	Coherence properties and density fragmentation . . . . .	63
3.5	Quantum tomography on 1D states . . . . .	65
3.6	Penrose-Onsager criterion validation . . . . .	71
3.7	Conclusion . . . . .	73
<b>4</b>	<b>Spontaneous pattern formation in ring condensates</b>	<b>75</b>
4.1	Overview . . . . .	75
4.2	Modified Mach-Zehnder interferometry . . . . .	76
4.3	Appearance of multi-lobe ordered patterns . . . . .	79
4.4	Theoretical simulations of pattern formation . . . . .	80
4.4.1	Simulation parameters . . . . .	83
4.5	Conclusion . . . . .	83
<b>5</b>	<b>Dynamics of vortices in the spinor domain</b>	<b>85</b>
5.1	Integer and fractional vortices . . . . .	86
5.1.1	Scalar quantum fluids . . . . .	86
5.1.2	Spinor polariton condensates . . . . .	88
5.2	Vortex detection strategy . . . . .	90
5.3	Overview of the field . . . . .	92
5.4	Dynamics of spinor condensates . . . . .	94
5.4.1	Principle of the experiments . . . . .	94
5.4.2	Locating promising positions on the sample . . . . .	94
5.4.3	Measuring the vortex dynamics . . . . .	95
5.5	Theoretical modeling of the dissociation dynamics . . . . .	98
5.5.1	Spinor generalized Gross-Pitaevskii model . . . . .	98
5.5.2	Generation mechanism of half-vortices . . . . .	100

5.5.3 Simulation results . . . . .	101
5.5.4 Simulation parameters . . . . .	103
5.6 Conclusion . . . . .	104
<b>6 Hyperbolic Spin vortices</b>	<b>105</b>
6.1 Overview . . . . .	105
6.2 Topological formalism in the spinor domain . . . . .	107
6.3 Locating integer spin vorticity . . . . .	110
6.4 Assessing the spin textures . . . . .	111
6.5 Theoretical interpretation and simulations . . . . .	115
6.5.1 Simulation parameters . . . . .	120
6.6 Conclusion . . . . .	120
<b>7 Looking further: developing future experiments</b>	<b>123</b>
7.1 Phase imprinting and polariton condensates . . . . .	123
7.2 Setup for condensate manipulation . . . . .	124
7.3 Preliminary impressions and remarks on the sample . . . . .	129
<b>8 Conclusion</b>	<b>131</b>
<b>List of figures</b>	<b>134</b>
<b>Bibliography</b>	<b>135</b>
