Résumé	1
Abstract	3
Preamble	5
1 Introduction	10
1.1 Circadian Clocks	10
1.1.1 Time on Earth and Biological Rhythms	10
1.1.2 Circadian Clocks in Mammals	11
The (Transcriptional-Translational) Network of the Core-Clock	12
The Hierarchical Organisation of Clocks	15
1.1.3 Circadian Clocks in Mouse Liver	17
1.2 Being on Time : Expressing the Right Amount at the Right Time	20
1.2.1 Dynamical Regulation of Expression	20
Regulation of Gene Activation and Transcription	20
Regulation of Maturation and Accumulation of mRNAs	21
Regulation of Translation into Proteins	23
Regulation of Protein Activity	23
1.3 Uncovering the Clock Mysteries : a Non-Extensive Timeline	25
1.4 Computational Approach : Mathematical Modelling of the Circadian Clock and of Biochemical Reactions Associated	28
1.5 Questions Addressed During my Thesis Work	30
1.5.1 How do Rhythmic Transcriptional and Post-Transcriptional Regulation Interplay to Generate Rhythmic Accumulation of Mature mRNA?	30
1.5.2 What is the Circadian Control on Translation Initiation?	30
1.5.3 What are the Targets of the BMAL1/CLOCK Heterodimeric Transcription Factor in Human?	30
2 Results	32
2.1 Binding of Circadian Transcription Regulators and Rhythmic Transcription in Human U2OS Cells	33
2.1.1 Summary	33
2.1.2 Submitted Manuscript	34
2.2 Kinetics of transcription and associated epigenetic changes during diurnal cycles.	80
2.2.1 Summary	80
2.2.2 Published Manuscript	81

2.3	Role of the post-transcriptional regulation for the rhythmic expression of transcripts in mouse liver	112
2.3.1	Manuscript in preparation	112
2.4	The circadian clock coordinates ribosome biogenesis through regulation at the translational and post-translational levels.	149
2.4.1	Summary	149
2.4.2	Published Manuscript	150
3	Discussion & Perspectives	168
	Bibliography	172
	Curriculum Vitae	180
