
Table of Contents

1 Zusammenfassung	3
2 Abstract	5
3 Introduction	7
3.1 Eukaryotic DNA replication	7
3.2 Cellular DNA repair pathways.....	10
3.2.1 Direct DNA damage reversal.....	10
3.2.2 Mismatch repair.....	11
3.2.2.1 Prokaryotic mismatch repair	12
3.2.2.2 Eukaryotic mismatch repair	13
3.2.2.3 Mismatch recognition.....	14
3.2.2.4 Overall importance of mismatch repair and role in other metabolic pathways.....	17
3.2.3 Base excision repair	19
3.2.4 Nucleotide excision repair	21
3.2.5 Double-strand break repair.....	24
3.2.5.1 Non-homologous end joining	24
3.2.5.2 Homologous recombination	25
3.2.6 DNA damage bypass	27
3.2.7 Interstrand crosslink repair	29
3.3 Mismatch repair lead DNA damage tolerance and clinical implications.....	31
3.4 Signaling networks in response to DNA damage.....	34
3.4.1 ATM and ATR.....	34
3.4.2 DNA damage checkpoints.....	36
3.5 The <i>Xenopus laevis</i> egg extract system as a model for replication and replication-tethered DNA damage responses.....	39
4 Aims of this study	43
5 Results	45
5.1 Mismatch repair dependent processing of O6-methylguanine adducts in <i>Xenopus</i> egg extracts	45
5.2 Tools generated to facilitate the study of mismatch repair in <i>Xenopus laevis</i> egg extracts	69

5.2.1	Materials and methods	76
5.3	Additional observations	78
5.3.1	Role of MutS β in O6-methylguanine (^m eG) recognition	78
5.3.2	Materials and methods	82
5.4	Ribonucleotides misincorporated into DNA act as strand-discrimination signals in eukaryotic mismatch repair	84
6	Discussion	95
6.1	Studying O6-methylguanine adducts in <i>in vitro</i> replicating systems	95
6.2	Recognition of O6-methylguanine adducts by MutS β and its possible implications	101
7	Conclusions and perspectives	104
8	References	105
9	Acknowledgements	123
10	Curriculum vitae	125
