Abstract	i
Zusammenfassung	iii
1 Introduction	1
1.1 Applications of cold atoms and molecules	2
1.1.1 High-resolution spectroscopic experiments and physics beyond the standard model	2
1.1.2 Low-energy collisions and cold chemistry	3
1.1.3 Many-body interactions and their applications	5
1.1.4 Cold trapped samples and excited-state-lifetime measurements	6
1.2 Methods for the production of cold atoms and molecules	7
1.2.1 Methods starting from a sample of cold atoms	7
1.2.2 Methods starting from supersonic beams	8
1.2.3 Other methods	11
1.3 Rydberg-Stark deceleration	12
1.4 Outline of the dissertation	13
2 Theoretical Considerations	15
2.1 Rydberg states of the hydrogen atom in electric fields	15
2.2 Non-hydrogenic particles in an electric field	20
2.2.1 Non-hydrogenic atoms	20
2.2.2 Rydberg states of the hydrogen molecule	21
2.3 Landau-Zener dynamics at avoided crossings	27
2.4 Electric-field ionization of Rydberg states	30
2.5 Lifetimes of Rydberg states	32
2.5.1 Spontaneous emission	32
2.5.2 Blackbody-radiation-induced processes	38
2.5.3 Predissociation	39
2.6 Supersonic expansions	41
2.7 Deceleration of Rydberg particles in inhomogeneous electric fields	44
2.8 Numerical simulations	46

2.8.1	Particle-trajectory simulations	47
2.8.2	Calculations of state redistribution by Monte-Carlo simulations	52
2.8.3	Calculating spectra after Rydberg-Stark deceleration and trapping	57
3	Experimental methods	61
3.1	Sources for cold atoms and molecules	61
3.1.1	Production of cold hydrogen and deuterium atoms by photolysis	62
3.2	Vacuum-ultraviolet generation and laser systems	62
3.2.1	VUV generation	62
3.2.2	Laser setup and excitation scheme for atomic hydrogen and deuterium	64
3.2.3	Laser setup and excitation scheme for molecular hydrogen	65
3.3	Rydberg decelerator and trap	66
3.3.1	Vacuum systems	67
3.3.2	Successive generations of Rydberg-Stark decelerators and trapping devices	67
3.3.3	Pulse-tube cryocoolers	69
3.3.4	Cryogenic environments	70
3.3.5	Electronics	72
3.4	Detection of atoms and molecules	76
4	Rydberg-Stark deceleration and trapping of H and D	79
4.1	Introduction	80
4.2	Experimental setup	81
4.3	Adiabatic deceleration, deflection and off-axis trapping of a Rydberg H atom beam	84
4.4	Motional, isotope and quadratic Stark effects in Rydberg-Stark deceleration and trapping	87
4.4.1	Motional effects in the deceleration and trap loading process	88
4.4.2	The role of the quadratic Stark effect	93
4.5	Conclusions	96
5	Trap loss processes in off-axis trapping experiments of H atoms	97
5.1	Introduction	97
5.2	Experimental setup and techniques	97
5.3	Off-axis trap loss of Rydberg H atoms	99
5.4	Radiative processes in Rydberg H atom trapping experiments: Quantitative analysis	103
5.5	Collision-induced m -changing processes: Theoretical considerations and simulations	107
5.5.1	State-changing collisions between trapped Rydberg-Stark states	107
5.5.2	Monte-Carlo simulations	110

5.6	Collisional processes in Rydberg-H-atom trapping experiments	112
5.7	Conclusions	117
6	Trapping cold molecular hydrogen	119
6.1	Introduction	119
6.2	Experimental setup and procedure	120
6.3	Experimental results	123
6.3.1	Generation and characterization of circularly polarized VUV radiation	123
6.3.2	Deceleration and trapping of H ₂ in $ M_J = 3$, $n = 21 - 35$ Rydberg states	125
6.3.3	Stark-state-resolved deceleration and trapping of H ₂ molecules	127
6.4	Conclusions	130
7	Trap loss processes in Rydberg hydrogen molecule trapping experiments	131
7.1	Introduction	131
7.2	Experimental methods and techniques	131
7.3	Results	132
7.3.1	On-axis trap-loss processes at room temperature	132
7.3.2	Off-axis trap loss processes at cryogenic temperatures	134
7.4	Conclusions	141
8	Conclusions and outlook	143
8.1	Conclusions	143
8.2	Outlook: High-resolution spectroscopy and physics beyond the standard model	146
8.3	Outlook: Collisional studies with Rydberg-Stark decelerated samples of atoms and molecules	147
8.4	Outlook: Continuous trap loading	148
A	Physical Constants and Units	151
A.1	Constants	151
A.2	Atomic Units	152
A.3	Energy Equivalents	152
B	Angular momentum coupling and the Stark Hamiltonian matrix	153
B.1	Selected $3j$ Symbols	153
B.2	$6j$ Symbols	154
B.3	Stark matrix	155
C	Numerical simulations	157
C.1	Fluorescence lifetimes	157
C.2	Electric-field distributions and evaluation of electric-field gradients	168
