Summary	v
Zusammenfassung	ix
1 Introduction	1
1.1 Atmospheric aerosols	1
1.1.1 Definition, properties	1
1.1.2 Aerosol climate impact	2
1.1.3 Secondary organic aerosols	3
1.2 Gas phase	3
1.2.1 Volatile organic compounds	3
1.2.2 Hydroxyl radical	4
1.3 Gas-particle interaction	4
1.3.1 Gas-particle partitioning theory and the volatility basis set (VBS) approach	4
1.3.2 secondary organic aerosol (SOA) aging	5
1.3.3 Small carbonyls and methane	6
1.4 Motivation and thesis outline	8
2 Instrumentation	11
2.1 PSI smog chamber	11
2.2 Proton transfer reaction mass spectrometry (PTR-MS)	12
2.3 Isotope ratio mass spectrometry (IR-MS)	13
2.4 Chemical modeling with the Master Chemical Mechanism	13
3 Aging of Biogenic Secondary Organic Aerosol via Gas-Phase OH Radical Reactions	15
3.1 Introduction	15
3.2 Experimental Design	16
3.3 Model Description	18
3.4 Results	19
3.5 Discussion	22
3.6 Conclusions	23
4 OH clock determination by proton transfer reaction mass spectrometry	25
4.1 Introduction	25
4.2 Experimental setup	28
4.2.1 MUCHACHAS	28
4.2.2 Butanol-d9	29
4.3 Results and discussion	30
4.3.1 MUCHACHAS	30
4.3.2 Butanol-d9	33
4.4 Summary and conclusions	35

5	Volatility and hygroscopicity of aging secondary organic aerosol in a smog chamber	37
5.1	Introduction	37
5.2	The experimental setup	40
5.2.1	Smog chamber and associated instruments	40
5.2.2	V/H-TDMA instrument	41
5.2.3	Smog chamber operation	45
5.3	Results and Discussion	46
5.3.1	Thermogram of SOA and comparison with other studies	47
5.3.2	Ozonolysis - O ₃ induced condensation and ripening	49
5.3.3	SOA aging - OH induced chemical aging	52
5.3.4	Correlation of κ and VFR	55
	Maximum hygroscopicity and minimum volatility with addition of UV light	55
5.3.5	SOA aging - a closer look	55
5.4	Summary and conclusions	58
6	Further applications of the OH clock	61
6.1	Are 2-stroke mopeds the most important source of vehicular carbonaceous aerosol?	61
6.2	Cooking emissions might contribute to a remarkable extent to the organic aerosol mass	62
6.3	The link between organic aerosol mass loading and degree of oxygenation	62
7	The contribution of methane to aerosol carbon mass	65
7.1	Introduction	65
7.2	Methodology	66
7.2.1	Smog chamber	67
7.2.2	Instruments	67
7.2.3	Wall loss correction (wlc) and carbon mass determination	67
7.2.4	Experimental procedure	69
7.2.5	OH tracer	70
7.2.6	Modeling	71
7.3	Results and discussion	71
7.3.1	Initial stages of each experimental series and methane yields	71
7.3.2	Subsequent experiments	74
7.3.3	Further test experiments	77
7.4	Summary and conclusion	78
8	Conclusion and outlook	79
8.1	OH clock	79
8.2	Yield determination of small carbonyls and methane	80
9	List of abbreviations	99
	Acknowledgement	101
10	Curriculum vitae	103
