Zusammenfassung	ix
Summary	xiii
List of Notations	xvii
1 Introduction	1
1.1 Experimental Techniques for Molecular Electronics	5
1.1.1 The STM Measurement Technique	6
1.1.2 The Mechanically Controlled Break-Junction Technique	6
1.1.3 Nanoparticle Assisted Measurement Techniques	8
1.2 Plasmonic Structures	10
1.3 Aim of This Thesis	12
1.3.1 Outline	13
2 Theoretical Concepts for Molecular Electronics and Plasmonics	17
2.1 Entering the Regime of Mesoscopic Conductors	17
2.1.1 Conductance in a Quantum Conductor	20
2.1.2 Molecules for Molecular Electronics	22
2.1.3 Molecule-Electrode Interfaces	23
2.1.4 Charge Transport in a Molecular Junction	25
2.2 Basic Theoretical Concepts of Plasmonics	32
2.2.1 Fundamentals of Surface Plasmon Polaritons	33
2.2.2 Localized Surface Plasmon Polaritons	36
3 Gold Nanorod Synthesis and Characterization	41
3.1 Synthesis and Formation of Gold Nanorods	42

3.1.1	Synthesis of High Aspect Ratio Gold Nanorods without AgNO_3	43
3.1.2	End-to-end linked Gold Nanorods	45
3.1.3	Low Aspect Ratio Gold Nanorods Synthesized with AgNO_3 .	46
3.2	Reactivity of Gold Nanorods	48
3.3	Optical Properties of Gold Nanorods	49
3.4	Methods	51
3.4.1	Three-step Synthesis of High Aspect Ratio Gold Nanorods .	51
4	Gold Nanorod Dimers for Single Nanogap Devices	55
4.1	Fabrication Procedure	55
4.1.1	Influence of Processing on the Gold Nanorods	60
4.2	Electrical Device Characterization	61
4.2.1	Introduction to Organic Field Effect Transistor Technology .	62
4.2.2	Characterization of Contact Resistance	66
4.2.3	Pentacene Device Characterization	69
4.3	Intermediate Conclusions	70
4.4	Methods	72
4.4.1	Fabrication parameters for the nanorod dimer device	72
4.4.2	Stability of the Nanogap	74
5	Deterministic Assembly of Gold Nanorod Chains for Multiple Nanogap Devices	75
5.1	The Directed Capillary Assembly Method	77
5.1.1	Theory of Particle Transport and Transfer	78
5.1.2	Fabrication of the Si Master Structures	80
5.1.3	The Directed Assembly Tool	80
5.2	Assembly of Highly Deterministic Gold Nanorod Chains	82
5.2.1	Optimization of the Assembly Yield by Tuning the Template Properties and the Assembly Parameters	83
5.2.2	Qualitative and Quantitative Evaluation of the Assembly Experiments	87
5.3	Transfer of the Gold Nanorod Chains	90
5.3.1	Printing Tool and Method	90
5.3.2	Transfer Procedure	91

5.4	Influence of Trench Orientation on Assembly	93
5.4.1	Perpendicular Assembly	94
5.4.2	Parallel Assembly	95
5.5	Electrical Characterization of the Gold Nanorod Chains	96
5.5.1	Functionalization of the Gold Nanorod Chains with OPV-5 Molecules	97
5.6	Optical Characterization of the Gold Nanorod Chains	99
5.6.1	Raman Measurements on Gold Nanorod Chains	99
5.7	Intermediate Conclusions	101
5.8	Methods	104
6	Conclusion and Outlook	109
	Bibliography	137
A	Nanorod Dimer Devices with PMMA Protecting Layer	139
B	XPS Measurements on Low Aspect Ratio Gold Nanorods after Various Surface Treatments	141
B.0.1	Methods	145
C	Additional Gold Nanorod Chain Samples	147
D	Raman Measurements of Gold Nanorod Dimers and Multimers	151
	Curriculum Vitae	155
