

Table of Contents

Frequently used Abbreviations.....	6
List of Figures.....	7
Summary.....	9
Résumé.....	11
Thesis objectives and outline.....	13
1 Chapter I: General Introduction.....	15
1.1 The root: feeding organ of terrestrial plants	16
1.1.1 Root growth and development	16
1.1.2 Primary growth and tissue differentiation.....	16
1.1.3 Secondary growth and its effect on primary body of the root.....	18
1.2 The endodermis: the root's border guard	18
1.2.1 Endodermis specification	19
1.2.2 Three developmental states of the endodermis	20
1.2.2.1 State I; Primary developmental state of endodermis; Casparian Strip (CS)	20
1.2.2.1.1 Chemical nature of Casparian Strip (CS)	21
1.2.2.1.2 Casparian Strips (CS) as an apoplastic diffusion barrier	24
1.2.2.1.3 Casparian Strip in other plant tissues	25
1.2.2.2 State II; Secondary developmental stage of endodermis; Suberin lamellae	26
1.2.2.2.1 Chemical nature of Suberin	26
1.2.2.2.2 Suberin lamella as an apoplastic barrier	28

1.2.2.3	State III; Tertiary developmental stage of endodermis	30
---------	---	----

2 Chapter II: Casparian Strip diffusion barrier in *Arabidopsis* is made of a lignin polymer without suberin32

2.1	Collaborators and Contributions.....	33
2.2	Original article	33

3 Chapter III: Understanding patterning, differentiation, and functioning of endodermal passage cells34

3.1	Collaborators and contributions.....	35
3.2	Introduction	35
3.3	Rationale of the study	37
3.4	Results and discussion	38
3.4.1	Passage cells presence revealed by Fluorol yellow (FY) in young roots...	38
3.4.2	Stele-expressed transporters are also expressed in the passage cells but exhibit different expression pattern	39
3.4.3	Stele-expressed transporters are expressed in some cortical cells located adjacent to the xylem pole endodermal cells	41
3.4.4	Patterning and differentiation of passage cells.....	42
3.4.5	Physiological importance of passage cells	43
3.4.6	Do all the endodermal cells become passage cells in the absence of suberin lamellae formation?	44
3.4.7	Identification of genes specific to passage cells using a two-component system	44
3.5	Conclusion and Perspectives	48
3.6	Experimental procedures	49
3.6.1	Plant Material and Growth Conditions.....	49
3.6.2	Chemicals	49

3.6.3	Vector Construction and Transformation.....	49
3.6.4	Microscopy and Histology	51
3.7	Literature cited.....	51
4	Chapter IV: Interference of CDEF1 (Plant Cutinase) with suberin accumulation in the periderm	54
4.1	Collaborators and Contribution	55
4.2	Introduction	55
4.3	Rationale of the study	56
4.4	Results and Discussion	57
4.4.1	pCASP1::CDEF1 transgenic line exhibits a significant reduction in root suberin deposited in the periderm	57
4.4.2	Fluorol Yellow (FY) staining reveals complete degradation of suberin accumulation in the periderm.....	58
4.4.3	Neither CASP1 nor ELTP promoters are active in the periderm	59
4.5	Concluding Remarks and Perspective	59
4.6	Experimental procedures	62
4.6.1	Plant Material and Growth Conditions.....	62
4.6.2	Chemicals	62
4.6.3	Vector Construction and Transgenic Lines	62
4.6.4	Microscopy and Histology	63
4.6.5	Suberin monomer analysis	63
4.6.6	GUS Staining assay	63
4.7	Literature cited.....	64
5	Chapter V: Co-author publications	65
5.1	A developmental framework for endodermal differentiation and polarity.....	66

5.1.1	Own contribution.....	66
5.1.2	Original article.....	66
5.2	Dirigent domain-containing protein is part of the machinery required for formation of the lignin-based Casparian Strip in the root	67
5.2.1	Own contribution.....	67
5.2.2	Original article.....	67
5.3	RETINOBLASTOMA RELATED1 Regulates Asymmetric Cell Divisions in <i>Arabidopsis</i>	68
5.3.1	Own contribution.....	68
5.3.2	Original article.....	68
6	Chapter VI: Conclusive remarks and Perspectives.....	69
6.1	Casparian Strip: Localized lignified impregnation in the endodermis	70
6.2	The endodermis: A system to study contributions of lignin and suberin to barrier formation.....	72
6.3	What is the role of Suberin in young roots?	72
6.3.1	Is lignification necessary for the apoplastic barrier properties of suberized layers? 75	
7	Chapter VII: References.....	77
8	Chapter VIII: Annex.....	86
8.1	VIII.A. Protocols and experimental procedures	87
8.1.1	Propidium Iodide (PI) Staining	87
8.1.2	Fluorol Yellow Staining (Suberin Staining).....	88
8.1.3	Observation of autofluorescence after clearing of whole roots.....	89
8.1.4	Fuchsine Staining (Lignin staining)	90
8.1.5	Phloroglucinol Staining (Lignin Staining)	91
8.1.6	Lignin extraction and quantification	91

8.1.7	Protocol for the collection of material for direct chemical analysis (thioacidolysis) of Casparian Strips by using the <i>ahp6-1</i> mutant.....	93
8.1.8	Lignin Inhibition and complementation Assays.....	94
8.1.8.1	Lignin Inhibitor assay with Piperonylic acid (PA)	94
8.1.8.2	Complementation assay using monolignol (Lignin monomers):.....	94
8.1.9	Gus-staining	95
8.2	VIII.B. Tables	97
8.2.1	Table 1. List of Passage cell specific, suberized cell-specific and endodermal cell specific fluorescent marker lines.....	97
8.2.2	Table 2. List of different mutants and transgenic lines used for crossings.	98
8.2.3	Table 3. List of transgenic lines generated for the cell-specific gene expression profiling.	99
8.2.4	Table 4. List of Passage cell-specific fluorescent marker lines crossed with different set of mutants, suberized cell and endodermal cell specific fluorescent marker lines.....	100
9	Acknowledgement.....	102
