

# TABLE OF CONTENTS

<b>Thesis abstract</b>	<b>i</b>
<b>Résumé en Français</b>	<b>vii</b>
<b>Introduction and outline of thesis</b>	<b>1</b>
<hr/>	
<b>Chapter 1</b>	<b>11</b>
<i>60 million years of continental fragmentation: Permo-Triassic anatexis, continental addition and ophiolite formation in NW Gondwana</i>	
1. Introduction	12
2. Regional geology and previous work	13
3. Materials and methods	18
3.1 Geochronology	18
3.2 Zircon Hf isotope geochemistry	20
3.3 Whole rock major oxide, trace element, rare earth element (REE) and Sr-Nd-Pb isotope geochemistry	21
3.4 Quartz oxygen composition	22
3.5 Muscovite $^{40}\text{Ar}$ - $^{39}\text{Ar}$ analysis	23
4. Results	
4.1 U-Pb zircon geochronology: Meta-granites and meta-sedimentary rocks	23
4.2 U-Pb zircon geochronology: Amphibolitic dykes and sills	25
4.3 Whole rock geochemistry: Meta-granites and meta-sedimentary rocks	26
4.4 Whole rock geochemistry: Amphibolitic dykes and sills	27
4.5 Zircon Hf isotope geochemistry	
4.5.1 Zircon Hf isotope geochemistry: Amphibolites	30
4.5.2 Meta-granite Hf isotope composition	32
4.6 $^{40}\text{Ar}/^{39}\text{Ar}$ dating: Meta-granites	33
5. Interpretation	
5.1 Isotopic and geochemical evolution of the amphibolites	34
5.2 Isotopic and geochemical evolution of the granitoids	35
5.2.1 Dis-equilibration reactions	36
5.2.2 Source-mixing	37
6. The tectonic environment in which the crustal anatectites and amphibolites formed	38
6.1 Early extension (~275-240 Ma)	39
6.2 Onset of mafic magmatism (~240-225 Ma)	40

6.3	Thermal decay of the rift margin and the formation of oceanic crust (~225-216 Ma)	42
6.4	The passive margin stage and its transition to an active margin	43
7.	Permo-Triassic rifting along NW Gondwana and potential conjugate margins	44
7.1	NW Gondwana	44
7.2	Conjugate margins to NW Gondwana	44
8.	A comparison with other rift settings	45
9.	Conclusions	46
	List of References	48
	Appendix 1: Supplementary table 1: Permo-Triassic U-Pb isotopic data and standard data	54
	Appendix 2: Supplementary table 2: Permo-Triassic Hf isotopic data	76
	Appendix 3: Supplementary table 3: Whole rock geochemistry	81
	Appendix 4: Supplementary table 4: Ar isotopic data	83

<b>Chapter 2</b>		<b>85</b>
	<i>Distinguishing between in-situ and accretionary growth of continents along active margins</i>	
1.	Introduction	86
2.	Geological Setting	87
3.	Methods	90
3.1	Whole rock geochemistry and Sr-Nd-Pb isotopes	90
3.2	LA-ICP-MS U-Pb geochronology	91
3.3	LA-MC-ICP-MS Hf isotope geochemistry	92
4.	Results	
4.1	Zircon U-Pb geochronology and Hf isotopic geochemistry	92
4.1.1	<i>Meta-sedimentary rocks</i>	93
4.1.2	<i>Magmatic rocks</i>	93
4.2	Whole rock geochemistry: major oxide, trace element, REE and Sr-Nd-Pb isotopes	94
5.	Accretionary versus in-situ growth of the north-western South American margin	95
6.	Crustal growth along active continental margins	100
	List of References	104
	Appendix 1: Supplementary figures 1-3	108
	Appendix 2a: Supplementary table 1: Sample description and whole rock geochemistry	111
	Appendix 2b: Supplementary table 2: LA-ICP-MS U-Pb zircon geochronology	118

Appendix 2c: Supplementary table 3: LA-MC-ICP-MS Lu-Hf isotope geochemistry	135
Appendix 2d: Supplementary table 4: Continental volume budget estimates	139
Appendix 3a: Late Cretaceous and Tertiary magmatic samples_ description and U-Pb geochronology	139
Appendix 3b: Late Cretaceous U-Pb data table	141
Appendix 3c: Late Cretaceous Hf isotopic data	144

<b>Chapter 3</b>	<b>146</b>
<i>High temperature (&gt; 350 °C) thermochronology and mechanisms of Pb loss in apatite</i>	
1. Introduction	147
2. The case study	149
3. Analytical methods	
3.1 U-Pb dating of apatite using ID-TIMS	150
3.2 U-Pb dating of apatite using LA-MC-ICP-MS	151
3.3 LA-ICP-MS zircon geochronology	152
3.4 $^{40}\text{Ar}/^{39}\text{Ar}$ analyses	152
4. Results	
4.1 U-Pb apatite data obtained using TIMS	152
4.2 U-Pb apatite data obtained using LA-MC-ICP-MS	156
5. The generation of theoretical t-T paths using the apatite U-Pb data	157
5.1 Testing the accuracy of the t-T solutions: Comparison with geological constraints	162
5.2 Testing the accuracy of the t-T solutions: Comparing predicted and measured intra-grain apatite U-Pb data	162
6. Thermochronology, recrystallization or interaction with aqueous fluids	165
7. Discussion and applications: reheating and slow-cooling of middle-lower crust	166
List of References	168
Appendix 1: Supplementary figures 1-3: Pb PRZ, crystal geometry and anisotropic diffusion	171
Appendix 2: Supplementary table 1: Zircon LA-ICP-MS U-Pb isotopic data	173
Appendix 3: Supplementary table 2: Argon isotopic data	174
Appendix 4a: Regional geological setting of Triassic crustal anatexite	175
Appendix 4b: The isotopic composition of common Pb	178
<b>Conclusions of thesis</b>	<b>180</b>
List of References	188
