

Table of Contents

Summary	1
Zusammenfassung	3
List of publications	6
Chapter 1: Introduction	8
1.1 The Cytoskeleton	8
1.2 Basic principles of microtubule assembly and dynamic behavior	9
1.3 Microtubule associated proteins (MAPs)	13
1.4 Microtubule plus-end tracking proteins (+TIPs)	15
1.4.1 EB proteins as autonomous plus-end trackers	16
1.4.2 EB protein dependent recruitment of +TIPs to microtubule plus-ends	18
1.4.3 Functions of EB dependent +TIPs	21
1.5 Aim of this work	24
Chapter 2: Identification and characterization of SLAIN as new key +TIP	26
2.1 Introductory note	26
Publication: SLAIN2 links microtubule plus-end tracking proteins and controls microtubule growth in interphase	27
Chapter 3: Biophysical and structural analysis of Kar9 and Bim1	56
3.1 Introduction	58
3.1.1 The Kar9 pathway of spindle positioning	58
3.1.2 Regulation mechanisms of the Kar9 spindle positioning pathway	60
3.1.3 Aim of this chapter and approach	62
3.2 Biophysical characterization of the Bim1-Kar9 complex	64
3.2.1 Bim1 forms stable dimers	64
3.2.2 Kar9 adopts an elongated shape and has the tendency to form oligomers	64
3.2.3 The C-terminal part of Kar9 binds Bim1 with nanomolar affinity	69
3.2.4 One Kar9 molecule binds one Bim1 dimers	72
3.2.5 Kar9 tracks microtubule plus-ends in vitro in an EB dependent manner	74
3.2.6 The Kar9-Bim1 interaction seems not to be regulated by phosphorylation of Kar9	76
3.2.7 Like Kar9 wild-type, Kar9 5E also has the tendency to oligomerize	76
3.2.8 The SxIP motif of Kar9 is involved in binding to Bim1 but not exclusively	78
3.3 Identification of a new EB-protein binding motif – LxxPTP(LIVT)	82
3.3.1 Identification of the second Bim1 binding motif in the C-terminal part of Kar9	82
3.3.2 Additional features next to the LxxPTPL motif are important for mediating high binding affinity to Bim1	82
3.3.3 ITC experiments confirm the existence of the second Bim1 binding site in Kar9	84

3.3.4	The LxxPTPL - Bim1C interaction includes electrostatic contacts	84
3.3.5	The LxxPTPL motif competes with the SxIP motif for binding to Bim1	87
3.3.6	The LxxPTP(LIVT) motif of Kar9 is conserved in <i>Saccharomycetaceae</i>	90
3.3.7	The LxxPTPL motif of Kar9 also binds to human EB1	90
3.3.8	The LxxPTPL motif of Kar9 is a new microtubule tip localization signal (MtLS)	93
3.3.9	Attempts to find an LxxPTP(LIVT) motif in other proteins	93
3.4	Towards the crystal structure of Kar9	100
3.4.1	Why is a Kar9 structure desirable?	100
3.4.2	Construct design for Kar9 crystallization	100
3.4.3	Characterization of different Kar9 N-terminal domain fragments	106
3.4.4	Crystallization hits and optimization trials	109
3.4.5	Limited proteolysis	118
3.4.6	Future directions	121
3.5	Towards the crystal structure of the LxxPTPL motif in complex with an end binding protein	126
3.5.1	Importance of such a structure	126
3.5.2	Design of Bim1 fragments for crystallization	128
3.5.3	Binding of different Bim1 fragments to LxxPTPL motif peptides of Kar9	130
3.5.4	Crystallization hits, optimization trials and evaluation of two datasets	130
3.5.5	Future directions	141
3.6	Discussion	144
3.6.1	Sumoylation of Kar9 is not necessary for its interaction to Bim1	144
3.6.2	The C-terminal part of Kar9 binds to the C-terminal domain of Bim1	145
3.6.3	EB proteins are sufficient to recruit Kar9 to microtubule plus-ends in vitro	146
3.6.4	Kar9 phosphorylation at the so far known sites seems not to affect binding to Bim1 or Kar9 oligomerization	146
3.6.5	An SxIP and an LxxPTPL motif in the C-terminal part of Kar9 mediate high affinity binding to Bim1, which might be important for Kar9's function in spindle positioning	146
3.6.6	Is the LxxPTP(LIVT) motif unique to Kar9?	148
3.6.7	Future directions for crystallization of Kar9 and the complex of EB proteins with the LxxPTP(LIVT) motif	149
3.7	Materials and Methods	152
Chapter 4: General conclusions and perspectives		158
4.1	Future directions of our work	158
4.2	Future directions in the +TIP field	161
