

## Contents

Introduction	1
0.1. Hyperbolic systems of conservation laws	2
0.2. Main results and outline of the thesis	9
Chapter 1. The $h$ -principle and convex integration	13
1.1. Partial differential relations and Gromov's $h$ -principle	14
1.2. The $h$ -principle for isometric embeddings	16
1.3. The $h$ -principle and the equations of fluid dynamics	20
Chapter 2. Non-uniqueness of entropy solutions with arbitrary density	33
2.1. Introduction	34
2.2. Weak and admissible solutions to the isentropic Euler system	35
2.3. Geometrical analysis	40
2.4. A criterion for the existence of infinitely many solutions	46
2.5. Localized oscillating solutions	52
2.6. The improvement step	54
2.7. Construction of suitable initial data	57
2.8. Proof of the main Theorems	62
Chapter 3. Global ill-posedness of the isentropic system of gas dynamics with regular initial data	65
3.1. Introduction	65
3.2. Subsolutions	69
3.3. A set of algebraic identities and inequalities	76
3.4. First method: data generated by compression waves for $p(\rho) = \rho^2$	78
3.5. Second method: further Riemann data for different pressures	85
3.6. Weak solutions to the incompressible Euler equations with vortex sheet initial data	94

Chapter 4. Classical solution of Riemann problems for isentropic Euler	99
4.1. Riemann data generated by compression wave	99
4.2. Solution of the Riemann problem via wave curves	101
4.3. Solution of the Riemann problem	107
Chapter 5. Existence of weak solutions	109
5.1. Introduction	109
5.2. The problem	110
5.3. Existence of weak solutions	112
Bibliography	117
