Anatomical and physiological comparison between rapid and focal inactivation of primary motor cortex hand area and slowly developing cerebral lesion in non-human primate.

Contents

Anatomical and physiological comparison between rapid and focal inactivation of primary motor cortex hand area and slowly developing cerebral lesion in non-human primate.	1
Abstract.....	2
Muscimol inactivation of the hand area of the primary motor cortex.....	3
Anatomical and physiological consequences of an extended cortical malformation called polymicrogyria.....	4
Discussion.....	5
Conclusion.....	6
Possible titles for a public presentation	7
Acknowledgments	8
Annexes.....	9
 Curriculum vitae	
 List of publications.....	
 Obtained diplomas.....
