Abstract	vii
List of Figures	xv
List of Tables	xvii
List of Notations	xix
1 Introduction	1
1.1 Physiology overview	1
1.2 Electrophysiology overview	2
1.3 Tissue mechanics overview	3
1.4 Electromechanics overview	4
1.5 Aims of this thesis	5
2 Theory	9
2.1 Continuum mechanics	9
2.1.1 Kinematics	9
2.1.2 Balance equation	12
2.1.3 Balance of mass and incompressible motion	14
2.1.4 Balance of momentum	15
2.1.5 Postulate of local thermodynamic equilibrium	16
2.1.6 Energy Balance	17
2.1.7 Dissipation inequality	19
2.1.8 Internal state variables	20
2.1.9 Constitutive relations	21
2.1.10 Incompressibility constraint	22
2.1.11 Principal invariants	23
2.1.12 Strong Ellipticity	24
2.2 Electrophysiology	26
2.2.1 Ionic Models	26
2.2.2 The anisotropic bidomain model	28
2.2.3 Monodomain reduction	29
2.3 Electromechanical Coupling	31
2.3.1 The Huxley model	31
2.3.2 Distribution moment model	33
2.3.3 Mean field approximation	34
2.3.4 Mechanoelectrical feedback	35
2.3.5 Mechanical activation	38
2.4 Summary of the governing equations	38
3 Cardiac models	41

3.1	Ionic models	41
3.1.1	The Noble model	42
3.1.2	Luo-Rudy phase I model	43
3.1.3	Aliev-Panfilov model	44
3.1.4	Human ventricular model: Ten Tusscher model	46
3.1.5	Minimal model	46
3.1.6	A minimal model for CICR	47
3.1.7	Human ionic models	49
3.2	Mechanical constitutive laws	49
3.2.1	Holzappel-Ogden constitutive law for cardiac tissue	50
3.2.2	Holzappel-Ogden constitutive law for isolated myocytes	51
3.3	Active mechanics	51
3.3.1	Active stress formulation	52
3.3.2	Active strain formulation	53
3.3.3	Active strain for isolated myocytes	54
3.3.4	Active strain for the ventricular wall	55
3.3.5	Linking cellular to tissue contraction	57
3.4	Comparison of active stress and strain formulations	60
3.4.1	Isotropic neo-Hookean materials	60
3.4.2	Materials described by isotropic exponential laws	61
3.4.3	Orthotropic Holzappel-Ogden materials	61
3.4.4	Orthotropic activation for Holzappel-Ogden materials	62
3.5	Qualitative comparison between active strain and stress approaches	63
3.6	Evolution laws for mechanical activation	65
3.6.1	Activation dynamics for active stress models	66
3.7	Derivation of an evolution law for the active strain formulation	68
3.7.1	Parameters tuning	70
4	Numerical methods	73
4.1	Mixed Formulation for static mechanics	73
4.1.1	Linearization of the momentum equation	75
4.1.2	Well-posedness analysis of the linearized problem around the rest state	78
4.1.3	Discrete form of the mechanical system	81
4.1.4	Incremental load method	82
4.2	Nearly-incompressible formulation	82
4.2.1	Linearization	86
4.2.2	Discrete problem	91
4.3	Discrete electrophysiological system	92
4.3.1	Fully discrete approximation	94
4.4	Discretization of the activation model	96
4.5	Solution algorithm of the cardiac electromechanical problem	97
4.5.1	Segregated algorithm	100
5	Numerical simulations	103
5.1	Traction test for isochoric-volumetric decomposition.	104
5.1.1	Traction test with mixed formulation.	104
5.1.2	Traction test with penalty formulation	108
5.1.3	Isotropic traction test	109

5.1.4	Orthotropic traction tests	111
5.2	Stress-free reference configurations	117
5.3	Static active mechanics	120
5.3.1	Example 1: Axial contraction of a neo-Hookean square	120
5.3.2	Example 2: Neo-Hookean square with localized contraction	122
5.3.3	Example 3: Comparison with an exact solution in 3D, Holzapfel-Ogden material	123
5.3.4	Example 4: Simulations on an idealized biventricular domain	125
5.3.5	Example 5: Simulations on a canine heart geometry	127
5.4	Isolated myocyte contraction	129
5.4.1	Slow calcium waves	131
5.5	The benchmark problem in electrophysiology	133
5.5.1	The electrophysiology benchmark coupled with mechanics	139
5.6	Orthotropic activation	140
5.6.1	Test 1: Quasi compatible deformations	143
5.6.2	Test 2: Transmural slab	144
5.7	Rule-based fibers and sheets reconstruction	146
5.8	Electromechanical coupling on an idealized left ventricle	147
5.8.1	Endocardial boundary conditions	152
5.8.2	A note on the numerical resolution	156
5.9	The human heart and the LBBB.	157
6	Final Conclusions	161
6.1	Limitations and future directions	163
7	Bibliography	165
	Curriculum Vitae	183
