

CONTENTS

i	INTRODUCTION	1
1	HOUSING GOODS AND THE HEDONIC APPROACH	3
1.1	The hedonic approach	3
1.1.1	Hedonic research on housing in Switzerland	5
1.2	Hedonic price indices for housing goods	6
1.2.1	Time-dummy hedonic price indices	9
1.2.2	Single and double imputed hedonic price indices	10
1.2.3	Characteristic hedonic price indices	11
1.3	Statistical problems of hedonic methods	12
1.3.1	Heterokedasticity and autocorrelation	12
1.3.2	Functional form	15
1.3.3	Variable selection and multicollinearity	16
1.3.4	Hedonic indices and the price index problem	18
1.4	Personal contribution	19
1.4.1	The econometric foundations of hedonic elementary price indices	19
1.4.2	Asymptotic properties of imputed hedonic price indices in the case of linear hedonic functions	20
1.4.3	A new approach to variable selection in the presence of multicollinearity: a simulated study with hedonic housing data	21
1.4.4	Selection of regression methods in hedonic price models based on prediction loss functions	22
ii	RESEARCH PAPERS	25
2	FOUNDATIONS OF HEDONIC ELEMENTARY PRICE INDICES	27
2.1	Introduction	27
2.2	Elementary Aggregates and the Hedonic Model	29
2.2.1	Goods and characteristics	29

	2.2.2	Characteristics and prices	34
2.3		Elementary price indices	36
	2.3.1	Elementary aggregates over time	36
	2.3.2	Concepts of elementary price indices	38
2.4		Hedonic elementary price indices	41
	2.4.1	The hedonic econometric model revisited	41
	2.4.2	Simple hedonic elementary population indices	42
	2.4.3	Full hedonic elementary population indices	44
	2.4.4	Universal formulae for hedonic elementary price indices	46
2.5		Confidence intervals of hedonic price indices	48
	2.5.1	Hedonic imputation indices	48
	2.5.2	Bootstrapped confidence intervals for hedonic imputation indices	51
	2.5.3	The special case of time dummy hedonic indices	53
2.6		Hedonic indices for single-family dwellings	54
	2.6.1	The data	54
	2.6.2	Specification and estimation of quarterly hedonic functions	55
	2.6.3	Computation of hedonic imputation indices and bootstrapped confidence intervals	57
2.7		Summary	59
3		ASYMPTOTIC PROPERTIES OF IMPUTED HEDONIC PRICE INDICES	61
	3.1	Introduction	61
	3.2	Hedonic imputed price indices: A review	62
	3.2.1	Single imputed hedonic price indices	63
	3.2.2	Double imputed hedonic price indices	63
	3.2.3	Characteristic hedonic price indices	64
	3.3	Convergence in probability	65
	3.4	Conclusions	69
	3.5	Asymptotic properties of linear hedonic models	71
4		A NEW APPROACH TO VARIABLE SELECTION	73
	4.1	Introduction	73
	4.2	Stepwise selection	74
	4.3	The multimodel approach	75

4.4	Price-relevant characteristics	77
4.5	Mean balanced accuracy	78
4.6	Simulation study	79
4.6.1	Price-generating process	80
4.6.2	Noise variables and hedonic regression equations	81
4.7	The data	82
4.8	Results	83
4.8.1	Backward stepwise selection and MBA	83
4.8.2	Multimodel selection and MBA	84
4.9	Conclusions	86
4.10	Backward selection pseudo-algorithm	87
5	SELECTION OF REGRESSION METHODS BASED ON LOSS FUNCTIONS	89
5.1	Introduction	89
5.2	Hedonic price model estimation and evaluation	90
5.2.1	Loss function and prediction accuracy	90
5.3	Comparing prediction performance	92
5.3.1	Permuted t-test	92
5.3.2	Modified Diebold and Mariano test	93
5.4	Empirical results	93
5.4.1	Data	93
5.4.2	Estimation comparison	95
5.4.3	In-sample prediction accuracy	95
5.4.4	Out-of-sample prediction accuracy	97
5.5	Conclusions	98
5.6	Loss functions	100
iii	FINAL REMARKS	103
6	CONCLUSIONS AND FURTHER RESEARCH	105
	BIBLIOGRAPHY	107
