Abstract	xi
Zusammenfassung	xv
Symbols and abbreviations	xix
I Introduction, motivation and theory	1
1 Introduction	3
2 Infrared spectroscopy	7
2.1 Beer-Lambert's absorption law	8
2.2 Fourier-transform infrared (FTIR) spectrometer . . .	11
2.3 Laser spectroscopy	11
2.3.1 Quantum cascade lasers	13
2.4 Spectroscopic techniques	14
3 Basic chemical principles	17
3.1 Law of mass action	17
3.2 Brønsted-Lowry acid-base theory	19
3.3 Partition coefficient	21

4	The body fluid saliva	23
4.1	Saliva production	23
4.2	Variations of salivary flow	26
II	Cocaine	29
5	Cocaine	31
5.1	Motivation	31
5.2	A short history of cocaine	32
5.2.1	The plant	32
5.2.2	Early consume in South America	33
5.2.3	Consume	34
5.3	Effect of cocaine	35
5.4	Metabolites of Cocaine	37
5.5	Cutting agents of street cocaine	41
5.6	Cutoff concentration of cocaine in saliva	44
5.7	Current measurement methods	45
5.7.1	Standard laboratory tests	46
5.7.2	Common on-site tests	47
5.7.3	Nonstandard and new tests	50
5.8	Current extraction techniques	53
5.9	False results on drug tests	53
6	Saliva acquisition	57
7	Sample preparation	59
7.1	Extraction of cocaine	59
7.1.1	Criteria for the choice of the solvent	60
7.1.2	Cocaine extraction	61
7.2	Water based samples	65
8	FTIR-ATR analysis	67
8.1	Measurement noise	68
8.2	Drying technique	69

8.3	Experimental measurement technique	71
8.4	Data processing for cocaine extracts	71
8.4.1	Efficiency of the cocaine extraction	74
9	Results of the FTIR-ATR analysis	75
9.1	Spectra of cocaine and metabolites	75
9.2	Potentially interfering substances	79
9.3	Saliva	87
9.4	Cocaine extracted from saliva	92
9.4.1	Saliva and cocaine	92
9.4.2	Calculation of the extraction efficiency of cocaine	94
9.4.3	The choice of the extraction solvent	96
9.4.4	Extraction of the metabolites	99
9.4.5	The improvement gained by TCE extraction	100
9.4.6	Results of the first extraction method	102
9.4.7	Influence of pH	104
9.4.8	Results on the second extraction method	104
9.4.9	Conclusion	109
9.5	Street cocaine analysis	111
9.5.1	Calculation of extraction efficiency of adulterants	111
9.5.2	Measurements of Street cocaine	114
10	Quantum cascade laser set-up	123
10.1	ATR measurements	126
10.2	Transmission measurements & cell design	127
10.2.1	Transmission cell measurement protocol	128
11	QCL analysis	131
11.1	QCL-ATR measurements	131
11.2	QCL transmission measurements	132
11.3	Conclusion of the QCL measurements	134

III Caffeine	137
12 Caffeine: Introduction & method	139
12.1 Effects of caffeine	140
12.2 Caffeine content	140
12.3 Extraction of caffeine	141
12.4 Method: Caffeine extraction	142
13 Infrared spectroscopy on caffeine	145
13.1 Caffeine in beverages and saliva	145
13.2 Quantitative measurements	149
13.3 Conclusion	151
IV Periodontitis trial	155
14 Periodontitis: Introduction & method	157
14.1 Porphyromonas gingivalis bacteria and periodontitis	157
14.2 Samples	159
15 Results of the G-AgP trial	161
15.1 Supernatant of saliva from G-AgP patients	161
15.2 Spectral analysis of porphyromonas gingivalis	165
15.3 Conclusion	167
V Conclusion, outlook and supplemental material	169
16 Conclusion and outlook	171
A Information for participants	175
B Consent form	179
C Questionnaire for participants	181

<i>CONTENTS</i>	ix
D Authorization to work with drugs	183
