

**Table of Contents**

Summary .....	iii
Zusammenfassung .....	vii
Abbreviations .....	xi

**Chapter 1 - Introduction**

1.1. RNA drugability and RNA-targeting strategies .....	1
1.2. MicroRNAs .....	5
1.2.1. Discovery of miRNAs .....	5
1.2.2. MicroRNA biogenesis .....	5
1.2.3. Strategies for the modulation of miRNAs .....	7
1.2.4. Treatment of HCV by targeting miR-122 .....	7
1.3. Nucleoside modifications .....	8
1.3.1. Sugar modifications .....	9
1.3.2. Base modifications .....	13
1.3.3. Backbone modifications .....	16
1.4. Chemistry .....	16
1.4.1. Oligonucleotide solid phase synthesis .....	16
1.5.2. Click chemistry .....	20

**Chapter 2 - Phosphoramidite synthesis, incorporation into oligonucleotides and post-modification via click chemistry**

2.1. Strategy .....	23
2.2. Phosphoramidite synthesis .....	24
2.2.1. Synthesis of 5-ethynyl-2'-O-methyluridine phosphoramidite .....	24
2.2.2. Synthesis of 2'-O-alkynyl-modified adenosine phosphoramidites .....	26
2.3. Incorporation of alkynyl-modified phosphoramidites into oligonucleotides .....	28
2.4. Post-synthetic Huisgen copper(I)-catalyzed alkyne-azide click reactions .....	32

**Chapter 3 – Synthesis of polyamine containing oligonucleotides via click chemistry**

3.1. Introduction .....	
3.1.1. Binding interactions of polyamines with DNA .....	34
3.1.2. Polyamines bound to RNA .....	37
3.1.3. Polyamine-oligonucleotide conjugates .....	39
3.1.3.1. Conjugation of polyamines at the 5-position of nucleobases .....	39
3.1.3.2. Conjugation of polyamines at other positions of nucleobases .....	44
3.1.3.3. Conjugation of polyamines at the riboses of DNA .....	44
3.1.3.4. Coconjugation of polyamines to RNA .....	45
3.1.4. Determination of duplex stability .....	48
3.1.4.1. Determination of melting temperature .....	48
3.1.4.2. Determination of thermodynamic parameters .....	49
3.2. Motivation .....	52

3.3. Results and Discussion.....	54
3.3.1. Synthesis .....	54
3.3.1.1. Synthesis of polyamine azides.....	54
3.3.1.2. Post-synthetic incorporation of polyamine azides into oligonucleotides using the Huisgen CuAAC reaction.....	55
3.3.2. Melting temperature measurements of spermine-modified oligonucleotides .....	60
3.3.3. Determination of thermodynamic parameters.....	65
3.3.3.1. Determination of thermodynamic parameters by van't Hoff analysis..	65
3.3.3.2. Determination of thermodynamic parameters by other methods.....	71
Chapter 4 – Conjugation of small molecules to oligonucleotides for the development of a new class of short microRNA inhibitors (antimirs) – Synthesis of a 72 member library	
4.1. Introduction: small-molecule – oligonucleotide conjugates .....	73
4.2. Project outline .....	74
4.3. Results and Discussion.....	81
4.3.1. Synthesis of modified antagomirs .....	81
4.3.2. Biological evaluation of the potential antimirs .....	85
4.3.2.1. Dual luciferase assay: Principle.....	85
4.3.2.2. Results .....	87
5. Conclusions and Outlook .....	97
6. Experimental part	
6.1. General methods and materials.....	99
6.2. Phosphoramidite synthesis .....	100
6.2.1. Synthesis of 5-ethynyl-2'-O-methyluridine phosphoramidite.....	100
6.2.2. Synthesis of 2'-O-pent-3-ynyladenosine phosphoramidite.....	101
6.3. Oligonucleotide synthesis.....	105
6.3.1. General methods for the synthesis of RNA oligonucleotides.....	105
6.3.2. General method for the postsynthetic modification of oligonucleotides by the Huisgen CuAAC reaction (Synthesis of the a small molecule-oligo- nucleotide library, synthesis of polyamine-oligonucleotide conjugates) ...	106
6.4. Determination of melting temperature and thermodynamic parameters .....	107
7. References .....	109
8. Appendix.....	137
Acknowledgments.....	142
Curriculum Vitae.....	143
