1	Introduction	1
1.1	Introduction	2
1.2	Nuclear Materials	2
1.2.1	The Fission Process	2
1.2.2	Uranium	3
1.2.3	Plutonium	3
1.2.4	Summary	4
1.3	Neutron Detection for Nuclear Security Applications	4
1.3.1	^3He Neutron Detectors	4
1.3.2	Alternative Neutron Detectors	5
1.4	^4He as a Neutron Detection Medium	5
2	He-4 Detector System Description	7
2.1	System Overview	8
2.2	Detector Components	8
2.2.1	Detector Tube	8
2.2.2	Photomultiplier Tubes	9
2.3	Data Acquisition Electronics	9
2.3.1	Analog Front End	10
2.3.2	DRS4 Signal Sampling	11
2.3.3	Transparent Mode	12
2.3.4	Digital Pulse Processing	12
2.3.5	Data Acquisition	12
3	Detector Response Characterization	13
3.1	Introduction	14
3.1.1	Neutron Interactions in He-4	14
3.1.2	Gamma Interactions in He-4	15
3.2	^4He Scintillation	16
3.2.1	Introduction	16
3.2.2	Spectroscopic Notation	16
3.2.3	Energy Dissipation of Charged Particles in ^4He Gas	17
3.2.4	Population Of Atomic States	17

3.2.5	Destruction of Atomic States and Formation of Excimers and Molecular Ions	18
3.2.6	Recombination	19
3.2.7	Emission Spectra	19
3.2.8	Light yield	20
3.2.9	Time Dependence of Helium Scintillation	20
3.2.10	Impurities and the Jesse Effect	21
3.2.11	Quenching	22
3.2.12	Liquid Helium Scintillation	22
3.3	Wavelength Shifters	23
3.3.1	Dopands as a Wavelength Shifter	23
3.3.2	Organic Wavelength Shifters	23
3.3.3	Nanostructured Organosilicon Luminophore	24
3.4	The Response of Arktis ^4He Detectors to α Particles	24
3.4.1	Scintillation Waveforms	24
3.4.2	Experimental Setup	24
3.4.3	Average Response	27
3.4.4	Fitting to Average Response Traces	27
3.4.5	Standard Long Detector Response	28
3.4.6	Standard Short Detector Response	28
3.4.7	Pressure Dependence of Slow Component Decay Time τ	29
3.4.8	Response of Detector with no WLS	32
3.5	Spectral Response	32
3.5.1	Algorithms for the Measurement of the Spectral Response of ^4He Detectors	33
3.5.2	Comparison of ^{252}Cf and ^{60}Co Response	36
3.5.3	Spectral Response as a Function of Pressure	36
3.5.4	Response to ^{60}Co and ^{252}Cf of a Detector without Wavelength Shifter	37
3.5.5	Contribution of WLS	39
3.5.6	Light Collection Contribution to Spectral Response	42
3.5.7	Spurious PMT Spikes and Afterpulsing	43
3.6	Summary	44
3.6.1	Time Structure	44
3.6.2	Spectral Response	45
3.6.3	WLS Contribution	45
3.6.4	Comparison to Previous Published Research	45
3.6.5	Possible Scintillation Processes in ^4He Detectors	46
4	Neutron Gamma Discrimination	47
4.1	Introduction	47
4.2	Neutron Dose	47
4.3	Measures of Neutron Gamma Discrimination Ability	48

CONTENTS

4.3.1	Intrinsic Gamma Rejection Efficiency	48
4.3.2	Gamma Absolute Rejection Ratio (GARRn)	48
4.3.3	Gamma Immunity and Radiation Portal Monitors	48
4.4	Neutron And Gamma Waveforms	49
4.5	Neutron Gamma Discrimination With Energy Deposit Threshold	49
4.6	Neutron Gamma Discrimination using Pulse Shape Discrimination	50
4.6.1	Pulse Shape Discrimination Algorithm in ^4He Detectors	50
4.6.2	Calibration of the Pulse Shape	51
4.7	Neutron False Positives	52
4.7.1	False Positives due to Incomplete Light Collection	52
4.7.2	Pileup Events	53
4.7.3	Pulse Height Ratio Filter	56
4.7.4	Effect of Pileup Filters	56
4.7.5	Effect of Pulse Height Ratio Filter	58
4.8	Calibration Stability over Multiple Detectors	58
4.8.1	Calibration Procedure	59
4.8.2	Calibration Variation	59
4.8.3	Discussion	60
4.9	Summary	60
5	Neutron Background Measurements	61
5.1	Introduction	62
5.2	Characteristics of Natural Neutron Background	62
5.2.1	Origin and Production	62
5.2.2	Energy Spectrum	63
5.2.3	Flux at Sea Level and Altitude Dependence	63
5.2.4	Variations of the Neutron Background	64
5.2.5	Ship Effect And Influence of Surrounding Materials	64
5.2.6	Measured Background Neutron Count Rate using ^4He Detectors	64
5.2.7	Detected Rates	65
5.2.8	Radon Background	65
5.2.9	Measured Neutron Background Rates	65
5.3	Fluctuations of the Fast Neutron Background	66
5.3.1	Introduction	66
5.3.2	Alarm Algorithms for Threat Detection using Neutron Gross Counting	66
5.3.3	Test for Poisson Assumption of Background Measurements	67
5.3.4	Summary and Discussion	70
5.4	Muon Background	70
5.4.1	Origin and Production	70
5.4.2	Spectrum and Flux	71
5.4.3	Interactions of Muons with Matter	72
5.4.4	Fluctuation of the Energy Loss	73

5.4.5	Experimental Results	73
5.5	Summary	76
6	Plutonium Measurements using a Spectral Technique	79
6.1	Introduction	80
6.1.1	Conventional Methods to Measure Pu Content	80
6.2	Demonstration of Spectral Capabilities	81
6.2.1	Introduction	81
6.2.2	Measurement Setup	81
6.2.3	Source Characteristics	81
6.2.4	Comparison of Spectral Responses	84
6.2.5	Discussion	85
6.3	Differentiation of Fission and (α, n) Neutrons	85
6.3.1	Differentiation between Neutrons from Fission and (α, n) on Oxygen	85
6.3.2	Neutron from (α, n) reactions on impurities	85
6.4	MOX and Calibration Source Description	87
6.4.1	MOX	87
6.4.2	Plutonium Effective Mass	87
6.5	Experimental Demonstration	88
6.5.1	Hardware Description	88
6.5.2	Measurement of Deposited Energy	88
6.5.3	Energy Calibration	88
6.5.4	Experimental Comparison of AmO and Fission Sources	90
6.5.5	Mass Measurements with Empirical Spillover Correction	92
6.5.6	Higher Cut	94
6.6	Systematic Effects	94
6.6.1	Response to Gamma Radiation	94
6.6.2	Simulations	95
6.7	Relation to the Point Model	96
6.8	Discussion	97
7	Radiation Portal Monitors with Time Correlation	99
7.1	Introduction	100
7.2	Evaluating Detection Performance	101
7.2.1	General Observations	101
7.2.2	Figure of Merit Based on Counting Statistics	101
7.2.3	Minimum Detectable Limit	102
7.3	Time Correlation Signatures	102
7.3.1	Time Correlation from Fission Processes	102
7.3.2	Other Time Correlation Signatures	103
7.4	Time Correlated Background	103
7.5	Detector Properties and Calibration Procedures	104
7.5.1	PVT Detectors	104

CONTENTS

7.5.2	Energy Calibration of PVT Detectors	104
7.5.3	Timing Calibration	105
7.6	Timing Properties of ^4He Detectors	105
7.6.1	Introduction	105
7.6.2	Timing Algorithms	105
7.6.3	Contribution to the Time Resolution	106
7.6.4	Time Resolution of ^4He Detectors	107
7.6.5	Cross Detector Time Resolution	108
7.7	Phase I	108
7.7.1	Experimental Setup	108
7.7.2	Phase I Trigger Functionality	109
7.7.3	Results	110
7.7.4	Discussion	113
7.7.5	Evaluating Signatures	115
7.8	Phase II	116
7.8.1	Phase II: Prototype RPMs exploiting Time Correlation and Neutron Counting	116
7.8.2	Experimental Setup	117
7.9	Experimental Results Phase II	119
7.9.1	Neutron Counting	119
7.9.2	Signature 2	120
7.9.3	Signature 1	121
7.9.4	Discussion	127
8	Summary	129
	List of Acronyms	133
	Bibliography	135
