1	Introduction	1
1.1	Vaccinia Virus	1
1.1.1	The Poxvirus Family	1
1.1.2	Host Cell Entry of Vaccinia Virus	2
1.1.3	Core Activation	4
1.1.4	Genome Release	5
1.1.5	DNA Replication	5
1.1.6	Morphogenesis of Vaccinia Virus	8
1.1.7	Regulation of VACV Gene Expression	12
1.2	Genome Uncoating	13
1.2.1	General Principles of Genome Uncoating	13
1.2.2	Uncoating of DNA Viruses	16
1.2.3	Uncoating of Poxviruses	23
1.3	Aim and Structure of the Thesis	27
2	Results	29
2.1	Labeling of the Poxvirus Genome	29
2.1.1	Introduction	30
2.1.2	Results	30
2.1.3	Discussion	31
2.1.4	Experimental Procedures	33
2.2	The Poxvirus Uncoating Factor	34
2.2.1	Abstract	35
2.2.2	Introduction	35
2.2.3	Results	38
2.2.4	Discussion	59
2.2.5	Experimental Procedures	62
3	Conclusion and Outlook	69
3.1	siRNA Libraries Targeting Viral Genes	69
3.1.1	The Poxvirus Early Gene Library	69

3.1.2	Future Applications of the VACV siRNA Library . . .	70
3.2	The Mechanism of Poxvirus Uncoating	73
3.2.1	Uncoating Models	73
3.2.2	Future Directions	78
3.3	Initiation of DNA Replication	80
3.3.1	Depletion of DNA Replication Factors	80
3.3.2	Structured Illumination of Pre-replication Sites	80
A	Review on Next Generation Approaches	83
A.1	Next Generation Approaches	83
A.1.1	Small Molecule Inhibitor Screening	84
A.1.2	Down-regulation of Host Genes	85
A.1.3	Gene Disruption	88
A.1.4	Ectopic Expression	90
A.1.5	Interactomics	90
A.1.6	Future Perspectives	91
	List of Acronyms	125
