

Contents

P. Preliminaries	1
P.1. Introduction	1
P.2. Comparison to Low Rank Methods	2
P.3. Photonic Crystals	3
P.4. Outline	5
I. Theory for Elongated Periodic Structures	7
I.1. Semi-infinite Periodic Structures	7
I.1.1. Notation, Function Spaces and Problem Formulation	7
I.1.2. Main Results	14
I.1.3. Variational Setting	15
I.1.4. Problem on Bi-infinite Domains	18
I.1.5. Limiting Absorption Principle	24
I.1.6. Connection of Resolvents on Ω^{inf} to Model Problems on Ω	31
I.2. Finite Unstructured Domains	38
I.3. Energy Flux Sesquilinear Form	40
I.3.1. Properties of $d[\cdot, \cdot]$	41
I.3.2. Proof of Theorem I.1.16	45
I.4. Finite Periodic Structures	47
I.4.1. Notation and Problem Formulation	47
I.4.2. Main Result	49
I.4.3. Variational Setting	49
I.4.4. Limiting Absorption Principle	50
I.4.5. Connection of Resolvents to Model Problems	52
I.5. Combining Multiple Domains	58
I.5.1. Setting	58
I.5.2. The Proof of Theorem I.5.2	60
I.6. Dirichlet-to-Neumann Map for Periodic Structures	64
I.6.1. Main Results	65
I.6.2. Error Bound for Truncated Bloch Mode DtN (Proof of Theorem I.6.5)	67
I.6.3. Bloch Mode DtN Map is of Fredholm Type (Proof of Theorem I.6.3)	70
I.6.4. Eigenfunctions for Single $\Omega(n)$ Domains and inf-sup Constant (Proof of Theorem I.6.7)	74
II. Fast hp-FEM for Periodic Structures	81
II.1. Overview	81

II.2. Standard FEM on Locally Periodic Structures	81
II.2.1. Block Structure of the Discretized System	85
II.2.2. Recursive Assembly	85
II.2.3. Static Condensation	90
II.2.4. Caching	92
II.2.5. Boundary Conditions	92
II.2.6. Complexity of Recursive Static Condensation with Caching	92
II.2.7. Reconstructing the Solution Vector	94
II.3. Locally Periodic Structures in Arbitrary Dimensions	94
II.4. Example Periodic Structures	98
II.5. Implementation Aspects	98
II.6. PML Radiation Condition	101
II.7. Numerical Results	102
III. Generalized hp-FEM	109
III.1. Outline	109
III.2. Model Problem	109
III.2.1. Governing Equations	109
III.2.2. Derivation of the PhC Barrier Problem	109
III.2.3. Radiation Condition for the Infinite Scatterer	110
III.2.4. The Strong Formulation	110
III.2.5. Formulation on the Infinite Strip	112
III.2.6. Scattering of Plane Waves	112
III.2.7. The DtN Operator	113
III.2.8. Well-posedness of the Variational Formulation	113
III.3. Bloch Modes and Best-Approximation of Finite Crystal Solutions	114
III.3.1. Ordering of Bloch Modes	115
III.3.2. Solving the Unit Cell Problem	117
III.3.3. Best-approximation of Finite Crystal Solutions	117
III.4. The Multiscale FEM	123
III.4.1. Multiscale Basis Functions	124
III.4.2. Hybridization of the Multiscale FEM—General Case	128
III.4.3. Hybridization of Multiscale FEM with Standard FEM	129
III.4.4. Well-posedness of the Discrete Problem	130
III.5. Computation of Matrix Entries by Fast Quadrature	131
III.5.1. Computation of Matrix Entries	132
III.5.2. A Size Dependent Quadrature	133
III.5.3. An Algorithm for Fast Quadrature	134
III.5.4. Derivation of the Fast Quadrature	136
III.5.5. An Optimized Algorithm for Fast Quadrature	142
III.5.6. Fast Quadrature—Numerical Results	142
III.6. Numerical Results	144
III.6.1. Experiments for Perpendicular Incidence	145
III.6.2. MSFEM for Oblique Incidence	148

C. Conclusions	151
C.1. The parfem.h Software Framework	151
C.2. Comparison	152
C.3. Conclusion	153
A. Appendix	A-1
A.1. A Related Work–Synopsis and Comparison	A-1
List of Symbols	A-11
Curriculum Vitae	A-13
