|--|------------|
| I Zusammenfassung | iii |
| II Abstract | vii |
| 1 Introduction | 1 |
| 2 The First-Principles Approach of Quantum Chemistry | 1 |
| 2.1 Overview of the Theoretical Methods in Chemistry | 2 |
| 2.2 Wave-Function-Based Approaches | 5 |
| 2.2.1 Single-Determinant Model | 5 |
| 2.2.2 Electron Correlation | 6 |
| 2.3 Density Functional Theory | 8 |
| 2.3.1 Kohn–Sham Formalism | 8 |
| 2.3.2 Electron Spin in DFT | 10 |
| 2.3.3 Approximations for the Exchange–Correlation Functional | 15 |
| 3 Attack of Oxygen Species at Fe-S Cubane Clusters | 23 |
| 3.1 Current Understanding of Oxygen Induced $[\text{Fe}_4\text{S}_4]$ Decomposition Processes | 23 |
| 3.2 Oxygen-Free Forms of the Clusters | 27 |
| 3.3 Possible Sites of Oxygen Attack | 29 |
| 3.4 ROS as Damaging Agents | 30 |
| 3.5 Dissociation of Cysteinyll Ligands | 38 |
| 3.6 Conclusions on Oxidation of $[\text{Fe}_4\text{S}_4]$ Clusters | 39 |
| 4 Regioselectivity of H-Cluster Oxidation | 41 |
| 4.1 Reducing the Complexity of the Problem: the Generic H-Cluster | 41 |
| 4.1.1 Reactivity of O_2 Along the H-Cluster | 42 |
| 4.1.2 The OOH^\bullet Radical as Damaging Agent | 52 |
| 4.1.3 Sulfoxxygenation | 54 |
| 4.1.4 Do Partially Destroyed H-Clusters Support the Catalytic Production of ROS? | 61 |
| 4.1.5 General Implications for Oxidation of Iron-Sulfur Clusters in Proteins | 62 |
| 4.2 A Full-Fledged Model Suitable for Theoretical Mutagenesis Studies | 66 |
| 4.2.1 Enzymes Wild Type: Impact of the Protein Framework on the Oxidation Reactions at H-Cluster | 66 |
| 4.2.2 Effect of Amino Acid Substitutions | 69 |
| 4.3 $[\text{NiFe}]$ Hydrogenases $[\text{Fe}_4\text{S}_3]$ Cluster | 75 |
