<b>Summary</b>	<b>9</b>
<b>Zusammenfassung</b>	<b>13</b>
<b>Chapter 1 - Introduction</b>	<b>19</b>
1.1 Soil compaction	20
1.2 Regeneration of soil compaction	24
1.2.1 Natural regeneration processes	24
1.2.2 Recovery rates	28
1.2.3 Mechanical soil loosening	29
1.3 Approach	30
1.3.1 Background	30
1.3.2 Black alder	32
1.3.3 Objectives	34
1.4 References	36
<b>Chapter 2 - Enhancing the regeneration of compacted forest soils by planting black alder in skid lane tracks</b>	<b>45</b>
Abstract	46
2.1 Introduction	47
2.2 Material and methods	51
2.2.1 Experimental sites	51
2.2.2 Experimental design and soil sampling	53
2.2.3 Measurements	56
2.2.4 Statistical analysis	58
	<b>1</b>

2.3 Results	59
2.3.1 Tree growth and root mass density	59
2.3.2 Morphological observations	61
2.3.2.1 Root growth	61
2.3.2.2 Qualitative soil characteristics in relation to treatments	62
2.3.3 Soil physical parameters	63
2.4 Discussion	68
2.4.1 Tree growth and root development	68
2.4.2 Soil physical aspects	70
2.5 Acknowledgements	73
2.6 References	74
<b>Chapter 3 - Recovery of forest soil from compaction in skid tracks planted with black alder</b>	<b>81</b>
Abstract	82
3.1 Introduction	83
3.2 Material and Methods	87
3.2.1 Study site	87
3.2.2 Experimental design	88
3.2.3 Sampling and sample analysis	90
3.2.4 Statistical analysis	93
3.3 Results	95
3.3.1 Treatment effects on physical and mechanical soil parameters	95
3.3.2 Rooting and the effect of compost application	99
3.4 Discussion	103

---

3.5 Acknowledgements	109
3.6 References	109
<b>Chapter 4 - Visual soil assessment of soil structure and hydromorphy as field indicators of forest soil recovery from compaction</b>	<b>115</b>
Abstract	116
4.1 Introduction	117
4.2 Material and Methods	122
4.2.1 Experimental design and sampling	122
4.2.2 Visual soil assessment (grid data collection)	124
4.2.3 Categorization of hydromorphic soil features and soil structure	126
4.2.4 Physical soil parameters	127
4.2.5 Statistical analysis	127
4.3 Results	130
4.3.1 Root counts	130
4.3.2 Hydromorphic soil features	132
4.3.3 Soil structure	136
4.3.4 Relationship between grid data and quantitative soil physical measurements	139
4.4 Discussion	143
4.4.1 Treatment effects on rooting	143
4.4.2 Hydromorphy as indicator of soil compaction and structural recovery	144
4.4.3 Morphological soil structure as indicator of soil compaction and structural recovery	145
4.4.4 Rooting and soil structure recovery from compaction	145
4.5 References	147

<b>Chapter 5 - Synthesis</b>	<b>155</b>
5.1 Suitability of black alders as a pioneer forest species for regeneration measures in compacted soil	155
5.2 Potential of black alder to enhance the structural regeneration of compacted forest soils and derivation of the dominant processes through which young alder trees influence the regeneration process	156
5.3 Evaluation of parameters that can be used in practice to characterize the degree of soil compaction and to monitor the process of structural regeneration of forest soils	158
5.4 Limitations of the study and recommendations for future research	161
5.5 Implementations in practice	163
5.6 References	165
