Acknowledgments	I
Table of Contents	II
List of Figures	IV
List of Tables	V
List of Abbreviations	VI
1 Summary	1
2 Introduction	3
2.1 Transcriptional regulation	4
2.1.1 <i>Cis</i> -regulatory elements	5
2.2 Chromatin	9
2.2.1 Nucleosomes	10
2.2.2 Defining nucleosome positions	11
2.3 Chromatin modifications	15
2.3.1 Histone modifications	15
2.4 DNA methylation	19
2.4.1 Evolution of DNA methylation	19
2.4.2 DNA methylation patterns in vertebrates	21
2.4.3 DNA methylation machinery	23
2.4.4 DNA demethylation	27
2.4.4.1 Passive and active demethylation	27
2.4.4.2 Direct removal of the methyl group	28
2.4.4.3 Targeted DNA repair	28
2.4.4.4 Oxidation mediated demethylation	29
2.4.5 Regulatory potential of DNA methylation	33
2.4.5.1 Gene-specific regulation	33
2.4.5.2 Mechanisms of methylation mediated gene repression	34
2.4.5.3 Protection from DNA methylation	35
2.4.5.4 Role of 5mC derivatives	35

2.5	Scope of this thesis.....	37
3	Results	39
3.1	Transcription factor occupancy can mediate active turnover of DNA methylation at distal regulatory regions	39
3.1.1	Summary	39
3.1.2	Published Manuscript	41
3.2	Quantitative analysis of DNA methylation turnover.....	57
3.2.1	Abstract	57
3.2.2	Global loss of methylation in DNMT3A/B double knockout embryonic stem cells	58
3.2.3	DNMT3A/B dependent DNA demethylation at active regulatory regions ..	60
3.2.4	Unbiased turnover quantification reveals its predominant targeting to cytosines with low methylation.....	64
3.2.5	Materials and Methods	69
3.2.6	Discussion	77
4	General Discussion and Conclusions	81
4.1	Transcription factor mediated demethylation	81
4.2	DNMT3-dependent remethylation.....	83
4.3	Transcription factor binding and turnover kinetics	84
4.4	Regulatory role of DNA methylation turnover	85
4.5	Implications of turnover.....	86
5	References.....	87
6	Curriculum vitae.....	107
