Preface	v
Abstract	vii
Zusammenfassung	ix
Contents	xii
List of Acronyms	xiv
List of Figures	xx
List of Tables	xxi
1 Introduction	1
1.1 Power systems operation	1
1.1.1 States of operation	2
1.1.2 Real-time operation	3
1.1.3 Day-ahead planning and economic operation . .	5
1.2 Motivation and problems to be addressed	7
1.3 Contributions and organization of the thesis	9
1.4 Publications	13
2 Probabilistic security-constrained DC optimal power flow	17
2.1 Introduction	18

2.2	Problem setup	20
2.2.1	Power flow equations	20
2.2.2	Dynamic considerations	22
2.2.3	Uncertainty Handling	23
2.3	Optimization problem	24
2.4	Dealing with the chance constraint	26
2.4.1	The “scenario approach”	26
2.4.2	The “probabilistically robust design”	27
2.5	Wind power modeling	29
2.6	Simulation results	31
2.7	Concluding remarks	35
3	Generation-side reserve scheduling	37
3.1	Introduction	38
3.2	Problem set-up and reserve representation	40
3.3	Probabilistic security constrained reserve scheduling . .	43
3.4	Tractable problem reformulations	46
3.4.1	Method 1: Heuristic algorithm	46
3.4.2	Method 2: Convex reformulation	48
3.4.3	Probabilistic guarantees	49
3.4.4	Discussion on method 2	50
3.5	Case study	52
3.5.1	Simulation set-up	52
3.5.2	Simulation results	54
3.6	Concluding remarks	58
4	Exploiting uncertain reserves from demand response	59
4.1	Introduction	60

4.2	Demand response resource modeling	62
4.3	Problem set-up	64
4.4	Problem formulation	66
4.4.1	Optimization problem	66
4.4.2	Solution approach	73
4.5	Case Studies	74
4.5.1	Data and error scenario generation	74
4.5.2	Simulation results	76
4.6	Concluding remarks	81
5	Exploiting component controllability	83
5.1	Introduction	84
5.2	Policies for preventive and corrective control	85
5.2.1	HVDC lines	85
5.2.2	Piecewise-affine policies	87
5.3	Case studies	88
5.3.1	Test system	88
5.3.2	Operating Costs	88
5.3.3	Wind power penetration	90
5.4	Conclusion	92
6	Probabilistic security-constrained AC optimal power flow	93
6.1	Introduction	94
6.2	Problem formulation	95
6.2.1	Definitions and preliminaries	95
6.2.2	Probabilistic security constrained optimal power flow	98

6.3	Tractable reformulation	99
6.3.1	Semi-definite constraints	99
6.3.2	Optimization over policies	100
6.3.3	Chance constraint	101
6.4	Case study	102
6.5	Concluding remarks	106
7	Conclusion	109
7.1	Summary	109
7.2	Outlook	110
A	Discussion on sampling based optimization techniques	113
A.1	Trading feasibility to optimality	115
A.1.1	Sampling and discarding	115
A.1.2	Heuristic approach	119
	Bibliography	120
	Curriculum Vitae	131
