

Table of Content

Chapter 1: Introduction – Background, Aim and Scope

1.1 General motivation, aim and scope of this dissertation.....	2
1.2 Overview of the dissertation	3
1.3 General terminology regarding PFASs	5
1.4 Production and major use of PFCAs, PFASs and their precursors	7
1.4.1 Production of PFCAs, PFASs and their precursors	7
1.4.2 Major historical and current use of PFCAs, PFASs and their precursors	8
1.5 Environmental and health-related profiles of PFCAs, PFASs & their precursors	11
1.5.1 Persistence and long-range transport potential	11
1.5.2 Bioaccumulation in biota and humans	11
1.5.3 Potential adverse effects in humans.....	12
1.6 Multimedia mass-balance modeling and its applications to PFCAs, PFASs and their precursors	13
1.6.1 Multimedia mass-balance modeling.....	13
1.6.2 Previous applications of multimedia mass-balance modeling to long-chain PFASs	14
1.7 Limitations in previous multimedia mass-balance modeling studies, open questions and critical knowledge/data gaps	16
1.7.1 A lack of quality data in the physicochemical properties of PFASs.....	16
1.7.2 Current emission inventory on PFCAs, PFASs and their precursors is incomplete.....	16
1.7.3 Current studies focused mainly on the long-chain PFCAs and PFOS.....	17
1.8 References	18

Chapter 2: Using COSMOtherm to Predict Physicochemical Properties of Poly- and Perfluorinated Alkyl Substances (PFASs)

2.1 Introduction.....	27
2.2 Methods.....	28
2.2.1 The COSMOtherm model and COSMO-RS theory	28
2.2.2 Chemicals	29
2.2.3 Evaluation of estimated property data	29
2.3 Results	30
2.3.1 Evaluation of COSMOtherm against measured properties of FTOHs.....	30
2.3.2 COSMO calculation results for other PFASs.....	32

2.4 Discussion	35
2.4.1 Limitations of property estimations	35
2.4.2 Performance evaluation of COSMOtherm for FTOHs and some other PFASs	35
2.4.3 Structure-related intermolecular interaction affects the partitioning behaviour of PFASs	36
2.5 Limitations and outlook	38
2.6 Acknowledgement	39
2.7 Supporting Information	39
2.8 References	39

Chapter 3: Atmospheric Fate of Poly- and Perfluorinated Alkyl Substances (PFASs): Emission Source Strength in Summer in Zurich, Switzerland

3.1 Introduction	45
3.2 Materials and methods	46
3.2.1. Model design	46
3.2.2. Model parameterization	47
3.2.3. Estimation of diffusive emission source strength	48
3.3 Results	49
3.3.1. Model results	49
3.3.2 Emission estimates of the four PFASs in Zurich city	49
3.3.3 Uncertainty analysis	49
3.4 Discussion	50
3.4.1. Estimated diffusive emission strengths of FTOHs in Zurich city	50
3.4.2. Estimated diffuse emission strengths of FOSAs in Zurich city	53
3.4.3. Limitations and outlook	53
3.5 Acknowledgments	53
3.6 Supporting Information	53
3.7 References	54

Chapter 4: Global Emission Inventories for C₄–C₁₄ Perfluoroalkyl Carboxylic Acid (PFCA) Homologues from 1951 to 2030, Part I: Emissions from Quantifiable Sources

4.1 Introduction	59
4.2 Methods	60
4.2.1 Identification of PFCA sources	60
4.2.2 Updated source classification	61
4.2.3 Quantification through the life-cycle	61

4.2.4 Analysis of industrial sources.....	64
4.2.5 Uncertainty Analysis.....	65
4.3 Results.....	65
4.3.1 Estimated total global emissions of C ₄ –C ₁₄ PFCAs from quantified sources (1951–2030).	65
4.3.2 Estimated global emissions of individual PFCA homologues from quantified sources.	68
4.3.3 Analysis of industrial sources.	69
4.4 Discussion.....	73
4.4.1 Comparison to Prevedouros et al. and other literature.	73
4.4.2 Comparison to estimated ocean inventory.	75
4.4.3 Uncertainty analysis.	76
4.4.4 Summary and future prospects.	77
4.5 Acknowledgements.	78
4.6 Supporting Information.	78
4.7 References.....	78

Chapter 5: Global Emission Inventories for C₄–C₁₄ Perfluoroalkyl Carboxylic Acid (PFCA) Homologues from 1951 to 2030, Part II: the Remaining Pieces of the Puzzle

5.1 Introduction.....	87
5.2 Newly identified but currently unquantifiable sources.....	88
5.2.1 Sources where PFCAs are emitted as ingredients or impurities (direct sources).....	90
5.2.2 Sources where PFCAs were/are emitted as degradation products (indirect sources).....	92
5.2.3 Sources where PFCAs were/are emitted as impurities/residuals and degradation products (direct + indirect sources).....	96
5.3 Can (bio)degradation of side-chain fluorinated polymers be a relevant source?.....	97
5.4 Summary and future prospects.....	99
5.5 Acknowledgements.	100
5.6 References.....	100

Chapter 6: Fluorinated Alternatives to Long-chain Perfluoroalkyl Carboxylic Acids (PFCAs), Perfluoroalkane Sulfonic Acids (PFSA) and Their Potential Precursors

6.1 Introduction.....	109
6.2 Production and use of fluorinated alternatives.....	110
6.2.1 Fluoropolymer manufacture.....	111
6.2.2 Surface treatment of textile, leather and carpets.....	111
6.2.3 Surface treatment of food contact materials.....	112

6.2.4 Metal (chromium) plating	112
6.2.5 Fire-fighting foams	112
6.2.6 Miscellaneous	113
6.3 Environmental and human exposure to fluorinated alternatives	113
6.3.1 Environmental releases	113
6.3.2 Persistence	114
6.3.3 Exposure of biota and humans	114
6.4. Major data gaps and future perspective	115
6.5 Acknowledgement	115
6.6 References	117

Chapter 7: Summary and Future Perspective

7.1 Summary of major results	125
7.1.1 Improved knowledge on the partitioning behavior of PFASs	125
7.1.2 More comprehensive understanding on the sources of PFCAs, both locally and globally	125
7.1.3 Tracking the on-going industrial transition to fluorinated alternatives	126
7.2 Perspective on future research	126

Appendices

Appendix 1: Supporting Information for Chapter 2

Equation of calculating weighting factors based on Boltzmann distribution	134
Comparison with available experimental data for the other PFASs	155
References	162

Appendix 2: Supporting Information for Chapter 3

A2.1 Monte Carlo uncertainty analysis and model parameterizations	165
A2.2 Information on the meteorological monitoring stations	170
A2.3 Information on the diel dynamics of the nocturnal boundary layer	171
A2.4 Analysis of the atmospheric fate of four PFASs	173
A2.4.1 Process-based analysis of model results	173
A2.4.2 Parameter uncertainty analysis of model results	174
A2.5 References	177

Appendix 3: Supporting Publication for Chapter 3

A3.1 Introduction	181
A3.2 Materials and methods.....	182
A3.2.1 Sampling locations	182
A3.2.2 Sampling.....	183
A3.2.3 Sample Preparation	184
A3.2.4 Instrumental Analysis	184
A3.2.5 Quality Assurance.....	185
A3.2.6 Statistical Analysis	185
A3.3 Results and discussion.....	185
A3.3.1 Concentrations of neutral PFASs (gas and particulate)	185
A3.3.2 Concentrations of PFAAs	189
A3.4 Conclusions	191
A3.5 Acknowledgements	192
A3.6 References:.....	192

Appendix 4: Supporting Information for Appendix 3

A4.1 Supplemental information on methods	197
A4.1.1 Instrumental Analysis	197
A4.2 Supplemental Information on Results and Discussion	201
A4.3 Supplemental References.....	208

Appendix 5: Supporting Information for Appendix 4

A5.0 Nomenclature.....	212
A5.0.1 Terminology regarding chemicals	212
A5.0.2 Terminology regarding product life-cycle	216
A5.0.3 Terminology regarding geographical distribution and units.....	216
A5.1 Methodologies of detailed emission estimates of each individual source.....	217
A5.1.1 Emissions from PFOA-based products.....	221
A5.1.2 Emissions from PFNA-based products	241
A5.1.3 Emissions from POSF-based products.....	245
A5.1.4 Emissions from fluorotelomer-based products.....	259
A5.2 Additional data analysis, Figures and Tables	269
A5.2.1 Reported production/import volumes of various PFASs in the US	269
A5.2.2 Environmental release media and geographical distribution profiles	270

Tables of contents

A5.2.3 Industrial events regarding PFCA-, PASF- and fluorotelomer-based products	271
A5.2.4 Raw data of the global annual emission fluxes of 8:2 and 10:2 FTOHs and xFOSA/Es in this study and derived from other studies	272
A5.2.5 The calculation of the PFCA ocean inventory	273
A5.3 Uncertainty analysis	274
A5.4 References	277

Abbreviations

Abbreviation of individual PFASs	289
Abbreviation of parameters	292

Curriculum Vitae
