Abstract	x
Zusammenfassung	xiii
1 Introduction	1
1.1 Evolutionary constraints	3
1.1.1 Metabolic constraints	3
1.1.2 Biophysical properties of proteins	4
1.1.3 The chemistry of the catalyzed reactions	5
1.2 Chorismate mutases and evolution	7
1.2.1 Active sites	7
1.2.2 CM scaffolds	10
1.3 Aims of this thesis	10
2 Evolvability of a molten globular enzyme and its thermostable counterpart	13
2.1 Introduction	13
2.2 Results	15
2.2.1 <i>In vivo</i> complementation by crippled CMs	15
2.2.2 Evolution of the Q88N variants	19
2.2.3 Kinetic characterization of representative CM variants	20
2.2.4 Proteolytic and thermal stability	25
2.2.5 Protein dynamics	30
2.3 Discussion	32
2.4 Materials and methods	36
2.4.1 <i>E. coli</i> strains and plasmids	36
2.4.2 <i>In vivo</i> complementation assay	36
2.4.3 Library construction and selection	37
2.4.4 DNA sequencing	39
2.4.5 Western blots	39
2.4.6 Protein production and purification	40
2.4.7 Chorismic acid production	40
2.4.8 Enzyme kinetics	41
	iii

2.4.9	Limited Proteolysis	42
2.4.10	Circular dichroism	42
2.4.11	ANS fluorescence	42
2.4.12	¹ H-NMR spectroscopy	43
3	An <i>in vivo</i> selection system for the laboratory evolution of highly evolved enzymes	44
3.1	Introduction	44
3.2	Results	46
3.2.1	<i>In vivo</i> complementation	46
3.2.2	Increasing selection stringency	47
3.2.3	The evolution of highly active enzymes	50
3.2.4	Biochemical characterization	53
3.3	Discussion	57
3.4	Materials and methods	60
3.4.1	<i>E. coli</i> strains and plasmids	60
3.4.2	Plasmid construction	61
3.4.3	<i>In vivo</i> complementation assay	61
3.4.4	CM library construction and selection	61
3.4.5	Protein production and purification	63
3.4.6	Circular dichroism	63
3.4.7	Enzyme kinetics	63
4	Towards computationally designed chorismate mutases	64
4.1	Introduction	64
4.2	Results	66
4.2.1	Computational CM designs	66
4.2.2	Protein production and design optimization	74
4.2.3	<i>In vivo</i> and <i>in vitro</i> activity of dCMs	76
4.2.4	Structural characterization	77
4.3	Discussion	79
4.4	Materials and methods	80
4.4.1	<i>E. coli</i> strains and plasmids	80
4.4.2	<i>In vivo</i> complementation assay	81
4.4.3	Protein production	81
4.4.4	Kinetic characterization	81

4.4.5	X-ray crystallography.	81
5	Perspectives	84
	References	87
	Appendix	102
	Curriculum Vitae	110
