Abstract	xi
Zusammenfassung	xiii
List of abbreviations	xv
1. General introduction	1
1.1. Energy storage and transportation	4
1.1.1. Storage options for electrical energy	4
1.1.2. Energy carriers for mobile use	7
1.1.3. Principles of electrochemical energy storage	8
1.1.3.1. Galvanic cell	9
1.1.3.2. Electrochemical double layer capacitors	12
1.1.4. Common battery types	14
1.2. Lithium ion batteries	16
1.2.1. Components for LIB	17
1.2.1.1. Cathode materials	18
1.2.1.2. Anode materials	20
1.2.1.3. Electrolyte	21
1.2.2. Challenges, next steps	22
1.3. Structure of this work	24
2. Interlayer modifications in partially reduced graphite oxide	25
2.1. Introduction	25
2.2. Methods	29
2.2.1. Graphite oxide reduction	29
2.2.2. Electrode preparation	30
2.2.3. Electrolyte mixtures	31
2.2.4. Electrochemical measurements	32
2.2.5. Elemental analysis	34
2.2.6. In-situ dilatometry	34
2.2.7. XRD analysis	36
2.2.8. NMR analysis	37
2.3. Experimental results and discussion	39
2.3.1. EMIMBF ₄ / AN	39
2.3.2. Electrolyte additives in EMIMBF ₄	46
2.3.3. Galvanostatic activation	52
2.3.4. XRD measurements	58
2.4. Conclusions and outlook	64

3. Delaminated lithium borocarbide as low weight electrode material	69
3.1. Introduction	69
3.2. Methods	73
3.2.1. LiBC synthesis	73
3.2.2. Ball milling	73
3.2.3. Electrochemical measurements	73
3.3. Experiments and results	76
3.3.1. LiBC as-prepared	76
3.3.2. Mechanically delaminated LiBC	76
3.3.2.1. Electrochemistry of delaminated LiBC	79
3.3.2.2. Reasoning for impaired cycling behaviour of LiBC	81
3.3.3. Reaction with metal chlorides	86
3.3.3.1. LiBC + FeCl ₂	86
3.3.3.2. LiBC + FeCl ₃	89
3.3.3.3. LiBC + MnCl ₂	90
3.3.4. Reaction with graphite oxide and graphite	92
3.3.5. Reaction with Li salts	94
3.3.5.1. LiBC + Li ₂ O	95
3.3.5.2. LiBC + Li ₂ C ₂	97
3.3.5.3. LiBC + Li ₂ S	98
3.3.5.4. LiBC + LiF	100
3.3.6. LiBC - HBC?	101
3.4. Conclusion	107
4. Polyaniline based electrode materials	109
4.1. Introduction	109
4.2. Methods	113
4.2.1. Synthesis	113
4.2.2. Chemical Analysis	113
4.2.3. Electrochemical behaviour	114
4.3. Experiments and Results	115
4.3.1. PANI-S as-prepared	115
4.3.2. PANI-S in metal complexes containing iron	127
4.3.2.1. PANI-S + FeCl ₃	127
4.3.2.2. PANI-S + K ₄ Fe(CN) ₆	131
4.3.3. PANI-S in metal complexes containing copper	134
4.3.3.1. PANI-S + CuCl ₂	134
4.3.3.2. PANI-S + Cu(acac) ₂	137
4.4. Conclusions and Outlook	140
5. Solid polymer electrolytes	143
5.1. Introduction	143
5.1.1. Types of solid electrolytes	144
5.1.2. Lithium ion sources and mobility in solid electrolytes	147
5.1.3. Electrochemical impedance spectroscopy	150
5.2. Methods	154
5.2.1. Polymer synthesis and film preparation	154
5.2.2. Composite cathode preparation	156

5.2.3. Impedance measurements	157
5.2.4. Battery setup	159
5.3. Experiments and Results	160
5.3.1. Conductivity measurements	161
5.3.2. Composite cathodes	165
5.3.3. Battery performance	166
5.3.4. Modifications of the polymer	170
5.4. Summary and outlook	175
6. Conclusions and outlook	177
