Zusammenfassung 1

Abstract 3

1. Introduction 5
- 1.1. Background . . . 5
- 1.2. Scope of the research . . . 6
- 1.3. Outline of the thesis . . . 7

2. Preliminary investigations 9
- 2.1. Lattice modelling . . . 9
  - 2.1.1. Concept . . . 9
  - 2.1.2. Generation of the lattice model . . . 11
  - 2.1.3. Fracture Simulation . . . 14
- 2.2. Digital image correlation . . . 22
  - 2.2.1. DIC process . . . 22
  - 2.2.2. Sample preparation . . . 25

3. Specimen production and generation 27
- 3.1. Introduction . . . 27
- 3.2. Rapid prototyping . . . 27
  - 3.2.1. Stereolithography . . . 28
  - 3.2.2. Selective Laser Sintering . . . 29
  - 3.2.3. Jetted Photopolymer . . . 29
  - 3.2.4. Process Comparison . . . 30
- 3.3. Single beam geometry . . . 31
- 3.4. Lattice geometry . . . 36
- 3.5. Single beam geometry for new approach . . . 36

4. Micro-mechanical behaviour: Single beams 43
- 4.1. Introduction . . . 43
- 4.2. Testing methods and parameters . . . 43
  - 4.2.1. Micro mechanical testing device and test setup . . . 43
  - 4.2.2. Environmental effects on the single beam behaviour . . . 46
  - 4.2.3. Testing series . . . 50
- 4.3. Input parameters for the classical model . . . 51
- 4.4. Input parameters for the new model . . . 62

Caduff, Daniel
Mechanics of 3D lattice structures produced by rapid prototyping
2014

digitalisiert durch
IDS Basel/Bern, im Auftrag der
Schweizerischen Nationalbibliothek

4.5. Conclusion 66

5. Macro-mechanical behaviour of lattice structures 71
5.1. Introduction 71
5.2. Test setup and boundary condition 71
5.3. Testing series and specimen preparation 74
5.4. Results 75
5.4.1. Tension 75
5.4.2. Compression 82
5.5. Discussion and conclusion 87

6. Numerical investigation of lattice structure behaviour 89
6.1. Introduction 89
6.2. Procedure for tensile simulations 89
6.3. Comparison between experiments and classical model in tension . . 91
6.3.1. Parameter study 97
6.4. Comparison between experiments and new model in tension 101
6.4.1. Parameter study 104
6.5. Procedure for compressive simulations 108
6.6. Comparison between experiments and classical model in compression 110
6.6.1. Parameter study 114
6.7. Comparison between experiments and new model in compression . 116
6.7.1. Parameter study 120
6.8. Discussion and conclusion 122

7. Conclusion and outlook 127

A. Tables and figures from specimen production and generation 131
A.1. STL-file export parameters 131
A.2. Global lattice geometries for different beam shape 131

B. Tables and figures from experimental results 135
B.1. Measured loading curves for different specimen geometries 135
B.2. Force-deformation curves for specimens with orientation 90°/55° . 142

C. Tables and figures for lattice experiments 145
C.1. LVDT measurements for tensile experiments 145
C.2. LVDT measurement for compressive experiments 146
C.3. Crack patters 147

D. Tables and figures for numerical investigation 149
D.1. Input parameters for classical model 149
D.2. Additional figures for parameter studies 150
