Introduction 1

1 Introduction 1
- 1.1 Context . . . 1
- 1.2 Motivation . . . 2
- 1.3 Method . . . 4
- 1.4 Hypothesis . . . 5

2 State of the Art 7
- 2.1 Daylighting devices . . . 7
  - 2.1.1 Light redirecting translucent structures . . . 8
  - 2.1.2 Blinds . . . 8
  - 2.1.3 Dynamic systems . . . 9
  - 2.1.4 Architectural integration . . . 10
- 2.2 Seasonal thermal control . . . 11
  - 2.2.1 Solar control glazing . . . 11
  - 2.2.2 Sun rays blocking devices . . . 12
  - 2.2.3 KoolShade . . . 13
  - 2.2.4 Architectural solutions . . . 13
  - 2.2.5 Dynamic systems . . . 14
- 2.3 Microstructures . . . 14
  - 2.3.1 Light redirection . . . 14

Kostro, André Gabriel
Microstructured glazing for daylighting, glare protection, seasonal ...
2015

digitalisiert durch
IDS Basel/Bern, im Auftrag der
Schweizerischen Nationalbibliothek

2.3.2 Angular dependent transmittance 15
2.3.3 Combination of microstructures with thin films 16
2.3.4 Microblinds 16
2.4 Combined solutions 17
2.4.1 Advanced blinds 17
2.4.2 Dual pane structured window 17
2.5 Technological gap - Ideal glazing concept 18

3 Development of a Simulation Framework **21**
3.1 Simulation principles 21
3.1.1 Monte Carlo technique 21
3.1.2 Ray tracing 22
3.1.3 Mixed dimensionality concept 23
3.1.4 Script based description of geometry and parameters 26
3.1.5 Project optimisation oriented GUI 26
3.1.6 Genetic algorithms 27
3.2 Physical models 28
3.2.1 Refraction and reflection (Snell-Descartes and Fresnel laws) 28
3.2.2 Absorption (Beer Lambert law) 29
3.2.3 Optical modelling of thin film interference 30
3.2.4 Modelling of the annual sky irradiance distribution 31
3.3 Analysis of angular behaviour 32
3.3.1 Transmittance depending on incoming elevation 32
3.3.2 Polar transmission distribution 33
3.3.3 Spectral transmittance 34
3.3.4 Bidirectional transmission distribution function (BTDF) 34
3.4 Advanced daylighting and thermal modelling 37
3.4.1 Reference room 37
3.4.2 Radiance rendering and glare rating 38
3.4.3 Daylight factor 39
3.4.4 Dynamic daylight metrics 39
3.4.5 Annual energy transmittance 41
3.4.6 Thermal modelling 41

4 Experimental Methods and Tools **45**
4.1 Fabrication of embedded mirrors 45
4.2 Sample preparation 47
4.3 Lift-off lithography 47
4.3.1 Photo lithography 47
4.3.2 Mask fabrication 48
4.3.3 Resin coating 49
4.3.4 Baking 49
4.3.5 Exposition 49

4.3.6 Development . . . 50
4.3.7 Lift-off . . . 50
4.4 Mould fabrication . . . 50
4.4.1 Electrical discharge machining . . . 52
4.4.2 Lithography . . . 52
4.4.3 Greyscale lithography . . . 53
4.4.4 Interference lithography . . . 54
4.4.5 Stereo lithography and 3D printing . . . 54
4.4.6 Laser ablation . . . 55
4.4.7 Polydimethylsiloxane formwork . . . 55
4.5 Replication . . . 57
4.5.1 Micro imprint lithography . . . 57
4.5.2 Resins . . . 57
4.5.3 UV source . . . 58
4.5.4 Alignment . . . 58
4.6 Reflective coatings . . . 59
4.6.1 PVD . . . 59
4.6.2 Balzers BA 510 . . . 60
4.6.3 Thickness study . . . 61
4.6.4 Angular setup for partial coating . . . 62
4.7 Encapsulation . . . 64

5 Characterisation Methods **65**
5.1 Spectral characterisations . . . 65
5.1.1 Theory . . . 65
5.1.2 Spectro-photometry . . . 66
5.2 Development of a miniature goniophotometer . . . 66
5.2.1 Measurement setup . . . 67
5.2.2 Spectral measurement . . . 69
5.2.3 Accuracy and validation . . . 70
5.2.4 *Protocol for measurement of structures* . . . 70
5.3 Profilometry . . . 72
5.3.1 Optical profilometry . . . 72
5.3.2 Contact profilometry . . . 72
5.4 Microscopy . . . 72
5.4.1 Optical microscopy for substrate analysis and lithography . . . 73
5.4.2 Confocal microscopy for coating location . . . 73
5.4.3 SEM for surface analysis . . . 74
5.4.4 EDX for surface analysis . . . 75
5.4.5 3D SEM for topography . . . 75

6 Simulation Results 77
6.1 Validation . . . 77
6.1.1 Thin film model validation . . . 78
6.1.2 Comparison with an other ray tracing software . . . 79
6.1.3 Validation of the implemented Perez sky model . . . 80
6.2 Novel design . . . 82
6.2.1 Optimisation of redirecting daylighting devices . . . 83
6.2.2 Two component design . . . 85
6.3 Parameters study . . . 87
6.3.1 Terminology and parameters . . . 87
6.3.2 Effects of parameters on light path . . . 89
6.3.3 General design guidelines . . . 90
6.4 Daylighting performance . . . 90
6.4.1 *V* matrix study . . . 90
6.4.2 Optimal target . . . 92
6.4.3 Adapted geometry . . . 93
6.4.4 Daylight factor . . . 94
6.4.5 Daylight autonomy and useful daylight illuminance . . . 96
6.5 Energy performance . . . 97
6.5.1 Optimal target . . . 97
6.5.2 Dynamic solar gains . . . 99
6.5.3 Heating - cooling . . . 100
6.6 Rendering . . . 101
6.7 Other simulation results . . . 103
6.7.1 Combination of structure with selective NIR-reflective coating . . . 103
6.7.2 Simulation of Klammt microstructure . . . 104
6.7.3 Modeling spectral dependent diffusion of fibre glass . . . 104

7 Experimental Results 107
7.1 Substrate with reflective stripes . . . 107
7.1.1 Lithography . . . 107
7.1.2 Lift-off . . . 110
7.2 Fabrication of a mould . . . 110
7.2.1 Electrical discharge machining . . . 111
7.2.2 Electropolishing of metalic moulds . . . 112
7.2.3 Smoothing by spin coating of resin . . . 113
7.2.4 Direct laser ablation . . . 114
7.3 Replication . . . 115
7.3.1 PDMS stamp . . . 115
7.3.2 Resin choice and properties . . . 117
7.3.3 Process parameters . . . 117
7.4 Coating . . . 118

7.4.1 Partial coating . . . 118
7.4.2 Angular study of deposition . . . 119
7.5 Encapsulation . . . 120
7.5.1 Plain encapsulation . . . 120
7.5.2 Encapsulation of mirrors . . . 122
7.5.3 Aligned encapsulation . . . 122
7.6 Goniophotometer measurements . . . 124
7.6.1 First generation samples . . . 124
7.6.2 Samples of latest generation . . . 125

8 Discussion **131**
8.1 Simulation . . . 131
8.1.1 Scattering . . . 131
8.1.2 Polarisation . . . 132
8.1.3 Optimisation by genetic algorithm . . . 133
8.1.4 Annual glare study . . . 134
8.1.5 Reach of CFSPro . . . 134
8.2 Design consideration . . . 134
8.2.1 Non constant geometry . . . 134
8.2.2 Location dependence . . . 134
8.2.3 Structure tilt on east and west facing windows . . . 135
8.2.4 Climatic evolution . . . 135
8.3 Microfabrication . . . 136
8.3.1 Engraving techniques for mould fabrication . . . 136
8.3.2 Replication problems . . . 136
8.3.3 Alignment . . . 136
8.4 Perspectives . . . 136
8.4.1 Improvement of the laser ablated mould . . . 136
8.4.2 Roll to roll . . . 137
8.4.3 Energy production . . . 137

9 Conclusion **139**

A Sky Model **143**
A.1 Motivation . . . 143
A.2 Theory . . . 146
A.2.1 Perez model . . . 146
A.2.2 Solar path . . . 147
A.2.3 Ground contribution . . . 147
A.3 Space time and Coordinate Systems . . . 148
A.3.1 BSDF dome . . . 148
A.3.2 Sun coordinate system . . . 150
A.3.3 Sky and Radiance . . . 150

A.3.4 V matrix 151
A.3.5 CFSPro 151
A.4 Implementation 151
A.5 Validation 151
A.5.1 Sky model 151
A.5.2 BTDF XML file 154

B Nodal Thermal Model **155**
B.1 Principles 155
B.1.1 Room definition 155
B.1.2 Solving the equations 157

C Lock-In Amplifiers **159**
C.1 Principles 159
C.2 Implementation and realisation 160
C.2.1 Sound card as data logger 160
C.2.2 LabView 161
C.2.3 C++ / QT 161
C.2.4 Electronic circuits 161
C.2.5 Dual channel lock-in 161
C.2.6 Limits 162

D Goniophotometer Short Manual **163**
D.1 Graphical user interface 163
D.2 Implementation 164

Bibliography **173**

Curriculum Vitae **175**
