SUMMARY7

ZUSAMMENFASSUNG9

LIST OF ABBREVIATIONS11

INTRODUCTION13

1. Metastasis13

1.1 The metastatic cascade: concepts and mechanisms13

1.1.1 Concepts of metastasis14

1.1.2 Tumor cells in circulation15

1.1.3 Tumor cell extravasation16

2. Selectins17

2.1 Factors that regulate E-selectin expression18

2.2 Selectin ligands18

2.3 Physiological roles of selectins20

2.3.1 The role of selectins during leukocyte rolling21

2.3.2 The role of integrins during leukocyte rolling21

2.3.3 Rolling-induced activation and signaling in leukocytes22

2.3.4 Firm leukocyte arrest22

2.3.5 Transendothelial migration23

2.3.6 Activation and signaling in endothelial cells upon E-selectin-ligand interaction24

2.4 Selectins in inflammatory diseases25

2.5 Role of selectin-selectin ligand axis in tumor dissemination25

2.5.1 Carcinoma mucins25

2.5.2 Sialyl-lewis^{x/a} during tumor progression and metastasis26

2.5.3 P-selectin during the metastatic process.....	27
2.5.4 L-selectin during the metastatic process	28
2.5.5 E-selectin during the metastatic process.....	28
2.5.5.1 E-selectin ligands involved in the metastatic process	29
2.5.5.2 Experimental <i>in vivo</i> evidence for E-selectin as facilitator of metastasis	30
3. Primary tumor microenvironment	31
3.1 Cancer-associated fibroblasts	32
3.2 Tumor vasculature	33
3.3 Tumor-infiltrating immune cells	33
3.3.1 Tumor-associated macrophages.....	34
3.3.2 Myeloid-derived suppressor cells	35
3.3.3 Tumor-associated neutrophils	36
3.3.4 Lymphocytes in the tumor microenvironment	37
3.3.5 E-selectin in primary tumors.....	38
3.4 Metastasis initiating processes in the tumor microenvironment.....	39
4. Metastatic microenvironment	41
4.1 Pre-metastatic niche formation.....	41
4.2 Leukocytes, chemokines and selectins shape the metastatic environment.....	43
4.3 Selectins and selectin ligands as therapeutic targets	46
5. Scientific aim	47
6. References	48
RESULTS	65
Manuscript: E-selectin-mediated monocyte adhesion and activation of the pulmonary endothelium induce vascular permeability and promote metastasis	65
DISCUSSION.....	109
1. E-selectin enables tumor cells to arrest and adhere to the microvasculature.....	109

TABLE OF CONTENTS

2. Early E-selectin-mediated processes promote metastasis110

3. A link between E-selectin and the chemokine CCL2 during metastasis111

4. E-selectin-mediated leukocyte adhesion facilitates metastasis112

5. Interactions between E-selectin and ligands on monocytes induce vascular permeability and tumor cell transmigration113

6. E-selectin involvement during later stages of metastasis?115

7. Conclusion and outlook116

8. References118

ACKNOWLEDGEMENT121

CURRICULUM VITAE.....123

APENDIX124

Review: Altered tumor-cell glycosylation promotes metastasis124
