Remerciements	i
Abstract	iii
Résumé	v
Table of symbols	vii
List of abbreviations	ix
Chapter 1 Introduction	15
1.1 Objectives of this investigation	16
Chapter 2 Literature review	19
2.1 Process for the fabrication of metallic micro parts.....	19
2.1.1 Microcasting.....	19
2.1.2 Alternative fabrication processes for microspecimens dedicated to mechanical testing.....	22
2.2 Plastic deformation of bulk face centered cubic (FCC) metals.....	24
2.2.1 Mechanical response of bulk FCC single crystals with focus on aluminium	26
2.3 Mechanical behaviour at the micro and submicrometre scale.....	30
2.3.1 Whiskers.....	30
2.3.2 Strain gradient experiments	30
2.3.3 Polycrystal Thin films & uniaxial tests.....	31
2.3.4 Compression test on single crystals and size effect.....	32
2.3.5 Tensile tests on micro and nanospecimens	38
2.3.6 Current theories for the size effect.....	39
2.3.7 Stochastic nature of plastic deformation.....	40
Chapter 3 Experimental procedures	45
3.1 Casting process.....	45
3.1.1 Moulds produced by cold isostatic pressure (Powder method).....	46
3.1.2 Investment moulds (Investment method)	46

3.1.3	Moulds prepared from brine crystallization	47
3.1.4	Infiltration	50
3.1.5	Mould leaching.....	54
3.1.6	Gluing of the wires on the holders.....	55
3.1.7	Analyses performed on the wires	56
3.2	Tensile machine.....	60
3.2.1	Characteristics of the laboratory-built tensile machine	60
3.2.2	Procedure of a tensile test	63
3.3	Data treatment.....	65
3.3.1	Force-displacement signal	65
3.3.2	Time-force signal.....	66
Chapter 4	Results.....	71
4.1	Characterization of the fibre patterns.....	71
4.2	Surface characterization of the as-cast aluminium wires	74
4.2.1	Wires obtained from cold isostatic pressure moulds (powder method).....	74
4.2.2	Wires obtained from investment moulds (investment method).....	75
4.2.3	Castings obtained from moulds prepared by crystallisation	75
4.2.4	Surface topography.....	76
4.3	The microstructure of the aluminium microwires	79
4.3.1	Laue diffraction at the Swiss Light Source (SLS).....	79
4.3.2	TEM characterization of as-cast specimens	83
4.4	Mechanical response of as-cast aluminium wires.....	86
4.4.1	Tensile response of the 110 μm diameter wires and their surface topography	87
4.4.2	Tensile response of 13-15 μm and 18-20 μm wires and their surface topography	88
4.4.3	Tensile response of 7 μm wires and their surface topography	93
4.5	TEM investigations on the deformed specimens	99
4.5.1	The 15.2 μm deformed wire (TEM 3 )	99
4.5.2	The 6.8 μm deformed wire (TEM 4 )	102
Chapter 5	Discussion.....	105
5.1	Microcasting	105
5.1.1	Preparation of moulds containing microcavities	105
5.1.2	Infiltration & leaching	107

5.1.3	Microcastings	108
5.1.4	Limitations of the microcasting process developed during this project.....	110
5.2	Structure of microcast single-crystalline aluminium microwires	111
5.2.1	Shape.....	111
5.2.2	Surface	112
5.2.3	Initial metal microstructure	113
5.2.4	Summary	113
5.3	Influence of the wire orientation on the shape of the flow stress curves and the slip traces.....	114
5.4	Influence of the diameter on the mechanical response	115
5.4.1	Flow stress.....	115
5.4.2	Simple model for the size effect in the wires tested during this project.....	121
5.4.3	Strain.....	124
5.4.4	Strain burst statistics.....	124
Chapter 6	Conclusion	131
Chapter 7	Perspective	133
Chapter 8	Appendix	135
8.1	Appendix A – Pathways to improving the present microcasting process	135
8.2	Appendix B – Evolution of $d\tau/\tau$ during a load drop.....	136
8.3	Appendix C : Magnesium wires	138
8.4	Appendix D : Characteristics of all tested aluminium wires.....	142
