

Table of Contents

1	Abstract	1
2	Abbreviations	2
3	Scientific overview in relation to the thesis.....	3
3.1	Allergy – Development and risk factors	3
3.2	The allergic reaction	3
3.2.1	Sensitization	5
3.2.2	Provocation	5
3.3	Treatment strategies of allergy.....	6
3.4	The effector cells of the allergic reaction	8
3.4.1	Basophils.....	8
3.4.2	Mast cells.....	10
3.5	B cells	10
3.5.1	Developing of IgE-producing B cells	12
3.5.2	Interaction of B cells with Basophils and Mast cells	13
3.6	Immunoglobulins – IgG and IgE	15
3.6.1	IgG	16
3.6.2	IgE	17
3.6.3	Anti-IgE antibodies.....	17
3.6.4	Allergen-specific IgG antibodies	18
3.7	The Fcε-receptors	19
3.7.1	The high affinity FcεRI receptor	19
3.7.2	Low affinity IgE receptor; FcεRII or CD23.....	20
3.8	The Fcγ-receptors	21
3.8.1	The low affinity IgG receptor CD32	22
3.8.2	Targeting the low affinity receptor CD32	24
3.9	Therapeutic antibodies.....	24
3.9.1	Targeting IgE - Omalizumab.....	25
3.9.2	Targeting CD20 on B cells - Rituximab	25
3.9.3	Bispecific antibodies	26
4	Thesis Goal	27
5	Experimental Approach	29
5.1	Dissertation Equivalent I.....	29
5.2	Dissertation Equivalent II	53
5.3	Dissertation Equivalent III.....	76
6	Discussion	100
6.1	Overall Discussion	100
6.1.1	Basophils and CD32a	100
6.1.2	B cells and bispecific antibodies	101
6.2	Outlook.....	101
7	References of Overview and Discussion.....	103
8	Acknowledgements	113
9	Curriculum Vitae	114
10	Declaration of Originality.....	116
