Abstract (English/Français) iii

List of figures xi

List of tables xiii

1 Introduction 1

1.1 Problem Definition and Challenges 1

1.1.1 Object Detection 1

1.1.2 Polygon Detection 4

1.1.3 Challenges 7

1.2 Contributions 8

1.2.1 Efficient Low Level Feature Extraction 9

1.2.2 Regular Polygon Detector and Real-time Landing Site Detection 11

1.2.3 Free Shape Multiple Object Detection by Exploring Promising Cycles . . 11

1.3 Thesis Outline 12

2 Component Tree Segmentation in Images and Videos 13

2.1 Related Works 14

2.1.1 Connected filtering 14

2.1.2 Maximally Stable Extreme Regions 14

2.2 Component Trees 15

2.3 Image Segmentation using Non-flat Filtering 16

2.3.1 Modifying Topology by Enhancing Edges in Intensity Feature 18

2.3.2 Temporal Consistence in Videos 20

2.4 Experiments 22

Sun, Xiaolu
Localizing polygonal objects in man-made environments
2015

Schweizerischen Nationalbibliothek

2.4.1 Implementation Details 22
2.4.2 Comparison with Original MSER Approach 22
2.4.3 Comparison with Other Approaches 24
2.5 Conclusion 25

3 Region Based Line Segment Detector **31**
3.1 Related Works 31
3.1.1 Hough Based methods 31
3.1.2 Clustering Methods 34
3.2 Proposed Method 34
3.2.1 Detecting the Boundaries of MSERs as Edges 36
3.2.2 Defining Resolution using the Scale of MSER 37
3.2.3 Weighting the Votes by Kernel Estimation 39
3.3 Experiments 43
3.3.1 Implementation Details 43
3.3.2 Baselines 44
3.3.3 Experiments in Man-made Environments 45
3.3.4 Experiments on Noisy Images 46
3.3.5 Speed 47
3.4 Conclusion 47

4 Detecting Polygons as Candidate Landing Sites **57**
4.1 Motivation 58
4.2 Related Work 60
4.2.1 Unprepared Landing Sites 60
4.2.2 Landing Pads and Runways 62
4.2.3 Shape Regularity 63
4.3 Proposed Method 63
4.3.1 Shape Measurement 63
4.3.2 Extension to Component Tree Segmentation 65
4.3.3 Temporal Consistency 65
4.4 Experiments 67
4.4.1 Experimental Setup 68
4.4.2 Results 69
4.5 Conclusion 71

5 Free Shape Polygonal Object Detection **79**

5.1 Motivation 80

5.2 Related Works 82

5.3 Graph Construction 83

5.4 Assigning Weights to Nodes and Edges 86

5.4.1 Training Data 86

5.4.2 Image Features 87

5.5 Search by Graph Partition 87

5.5.1 Bounding the Number of Cycles in a Graph 88

5.5.2 Partitioning the Graph 89

5.6 Search by Contour Grouping 89

5.7 Relationship to other Approximation Algorithms 91

5.8 Cycle Scoring Functions 93

5.8.1 Feature Vectors 93

5.8.2 Training the SVM 94

5.9 Experiments 94

5.9.1 Datasets 94

5.9.2 Experimental Setup and Baselines 95

5.9.3 Object Hypotheses 97

5.9.4 Object Detection 100

5.10 Conclusion 102

6 Concluding Remarks **109**

6.1 Limitations and Future Works 110

A Proofs for Approximated Search Algorithm **113**

A.1 Definition of Thresholding Tree 113

A.2 Computation Complexity Analysis 114

A.3 Proof of the Equivalence between Partition Algorithm with Grouping Algorithm 115

A.3.1 Representation 115

A.3.2 Partition Algorithm 116

A.3.3 Grouping Algorithm 116

A.4 Grouping Algorithm for a Directed Graph 119

Bibliography **134**

Curriculum Vitae **135**
