Keywords	iv
Résumé	v
Mots-clés	vi
Contents	vii
List of Figures	xi
List of Tables	xv
List of Equations	xvii
List of Appendix	xix
List of acronyms	xxi
Chapter 1 Introduction	1
1.1 Motivation	1
1.2 Problem statement.....	1
1.3 Research objectives	3
1.4 Significance of research (challenges).....	4
1.5 Thesis organization	6
Chapter 2 Literature Review	7
2.1 Fuzzy-logic based systems	7
2.1.1 Application of fuzzy logic controllers	7
2.1.2 Components of fuzzy logic controllers	9
2.1.3 Basic concepts from fuzzy sets theory	13
2.2 Significance of W-EDM	15
2.2.1 W-EDM process.....	15
2.2.2 W-EDM surface defects.....	16
2.2.3 Online monitoring and control of W-EDM process	19
Chapter 3 Fuzzy-nets based MIMO part quality characteristics prediction and process parameters adjustments suggestions system for W-EDM	21
3.1 Semantically enriched process model (SEPM).....	22
3.2 MIMO Fuzzy-nets prediction system	27
3.3 Part quality prediction subsystem (PQPS)	29
3.3.1 Identification of relevant input parameters.....	29

3.3.2	Preconditions for generating the rule base.....	30
3.3.3	Source for the generation of fuzzy rules	32
3.3.4	MIMO Part quality prediction subsystem (PQPS) algorithm	33
3.3.5	Example from W-EDM.....	40
3.3.6	The experimental data	41
3.3.7	Experimental data analysis.....	41
3.3.8	Using experimental data	42
Chapter 4	An offline optimization method for vital process parameters in W-EDM using hybrid approach based on fuzz-nets and genetic algorithms.....	53
4.1	Problem statement: Surface roughness and recast layer in W-EDM.....	53
4.2	Optimization Models for W-EDM	54
4.2.1	Genetic Algorithms.....	55
4.2.2	Multi-objective optimization.....	58
4.2.3	NSGA-II	59
4.3	Methodology.....	60
4.4	Surface roughness and recast layer thickness prediction.....	62
4.4.1	Development of the fuzzy-nets model.....	63
4.4.2	Knowledge Base	65
4.4.3	Inference Model.....	67
4.4.4	Defuzzification Model	69
4.4.5	Validation of fuzzy model.....	69
4.4.6	Selection of Optimal Process Parameters Using GA.....	70
Chapter 5	Development of experimental method for diagnosis of surface defects in Wire-EDM (Short-circuit detection)73	
5.1	Surface defects in W-EDM.....	74
5.2	Description of in-process diagnosis method.....	74
5.3	Design of experiment	77
5.3.1	Choice of process	77
5.3.2	Choice of experimental plan	78
5.4	Experimental setup.....	78
5.4.1	W-EDM machine and workpiece.....	78
5.4.2	Data acquisition system	79
5.5	<i>Experimental Procedure and method.....</i>	<i>81</i>
5.5.1	Method of locating surface defect w.r.t. machining position	81
5.5.2	Positioning signal through DAQ	82
5.5.3	Treatment of the position with Matlab.....	83
5.5.4	Matlab code for data extraction	85
5.6	Results and analysis	86

5.6.1	Correlation between occurrence of short-circuit and surface defects.....	87
5.6.2	Correlationship between the short-circuit characteristics and surface defects.....	90
Chapter 6	Online process parameters adjustment system for surface defects in W-EDM.....	97
6.1	Hardware equipment	98
6.1.1	W-EDM machine	99
6.1.2	Sensor system	100
6.1.3	Operator and AgieCharmilles NC-PCs.....	100
6.1.4	Analogue board.....	100
6.1.5	Acquisition card AD2100.....	101
6.1.6	Dual port memory with FPGA cyclone II base processor (DPM)	102
6.1.7	Hardware and software interfaces.....	103
6.2	Online part quality diagnosis system	105
6.2.1	Design of experimental plan	106
6.2.2	Experimental setup	106
6.2.3	Experimental Procedure and method	107
6.2.4	Results and analysis.....	108
6.2.5	Triggering of the adjustment system	112
6.3	Experiments for validation.....	115
6.3.1	Interface validation	116
6.3.2	Online VPP adjustment validation.....	116
6.4	Results and analysis	117
6.4.1	Interface validation	117
6.4.2	Online VPP adjustment validation.....	118
Chapter 7	Conclusion	121
7.1	Achieved results	121
7.2	Future development	124
References.....		125
Appendix		133
