Abstract (English/Deutsch)	III
List of Figures	VII
1 Introduction	1
2 Principles of Scanning Tunneling Microscopy	5
2.1 Introduction to electron tunneling and STM	6
2.2 Operation modes	9
2.3 Scanning Tunneling Spectroscopy	12
2.4 High-resolution molecular imaging using functionalized tips	14
2.5 Surface states on noble metals	16
3 Organic molecules on metallic surfaces	19
3.1 Introduction	20
3.1.1 Interaction between organic molecules and noble metal surfaces	20
3.2 Adsorption of pentacene and its thiophene derivatives on metal substrates	22
3.2.1 Experimental	23
3.2.2 Pentacene on Cu(111)	23
3.2.3 TCT on Cu(111)	23
3.2.4 ADT on Cu(111)	25
3.2.5 ADT on Au(111)	27
3.2.6 Conclusion	28
3.3 Conductance measurements of pentacene and its thiophene derivatives	30
3.3.1 Introduction	30
3.3.2 Molecule-electrode energy level alignment	32
3.3.3 Experimental	34
3.3.4 Conductance measurements of pentacene and TCT	35
3.3.5 Conclusion	37
4 Molecular switches	39
4.1 Introduction	40
4.2 Bipolar conductance switching of single ADT molecules	42
4.2.1 Telegraph noise	46
4.2.2 Switching mechanism	48
4.2.3 ADT adsorption on Cu(111)	50

4.2.4	Conclusion	52
4.3	Surface state carrier mediated non-local switching	54
4.3.1	Isomer selectivity by means of surface state carrier mediated switching	58
4.3.2	Lifetime and decay length of surface state carriers	60
4.3.3	Conclusion	63
4.4	Summary and Outlook	65
5	Electronic and magnetic interactions in atomic-sized palladium contacts	67
5.1	Palladium - a nearly ferromagnetic metal	68
5.2	Transport in metallic atomic-sized contacts	69
5.3	Experimental	70
5.4	Results and Discussion	73
5.4.1	Conductance and workfunction measurements	73
5.4.2	Spectroscopy on Pd adatoms	76
5.5	Summary and Outlook	78
6	Conclusion and perspectives	81
6.1	Thiophene-derivatives of pentacene: Adsorption studies and conductance measurements	81
6.2	Molecular switches: Local and non-local switching	81
6.3	Atomic-sized palladium contacts: Magnetic vs non-magnetic	82
6.4	Perspectives	83
	Bibliography	85
