Summary

German Summary

Introduction & Discussion..... 1

1. Local auxin maxima and minima play an important role  
in many aspects of plant development and performance..... 1

a. Root gravitropism..... 1

b. Lateral root development..... 2

c. Planar polarity of root hair..... 2

2. PAT is established and controlled by auxin exporters..... 4

a. AUX1/LAX proteins act as auxin influx carriers..... 4

b. PIN proteins act as auxin efflux carriers..... 5

c. ABCB act as ATP-dependent auxin transporters..... 7

d. ABCB-PIN interaction..... 9

e. ABCB-TWD1 interaction..... 10

f. Auxin transport inhibitors..... 14

3. Actin cytoskeleton..... 15

a. Actin cytoskeleton structure and function..... 15

b. Actin-binding proteins..... 18

i. Formins..... 19

ii. Profilins..... 20

iii. NETWORKED (NET) proteins..... 21

iv. Villins..... 21

c. Actin dynamics and its imaging..... 22

d. Actin drug treatments..... 24

4. Actin dynamics are important for plant development..... 25

a. Cell division and cell elongation..... 26

b. Polar growth: pollen tube and root hair.....	27
c. Trichome morphology.....	30
<b>5. Regulatory auxin-actin feedback loops.....</b>	<b>31</b>
a. Auxin modulates actin expression and actin organization/dynamics.....	31
i. <i>Auxin induces ACTIN expression</i> .....	32
ii. <i>Auxin activates the expression of actin-binding proteins</i> .....	32
iii. <i>ABP1-ROP2-RIC4 pathway</i> .....	37
iv. <i>Auxin transport inhibitors and actin cytoskeleton</i> .....	39
b. Actin stability affects auxin transporters endocytosis and recycling by regulating vesicular trafficking.....	46
i. <i>PINs</i> .....	46
ii. <i>AUX1/LAXs</i> .....	50
iii. <i>ABCBs</i> .....	50
<b>6. References.....</b>	<b>54</b>
 <b>7. Aim of this work.....</b>	 <b>75</b>
 <b>8. Results.....</b>	 <b>77</b>
1. Own project.....	77
2. Involvement in collaborative projects.....	143
 <b>9. Appendix.....</b>	 <b>145</b>
1. A novel putative auxin carrier family regulates intracellular auxin homeostasis in plants.....	145
2. Regulation of ABCB1/PGP1-catalysed auxin transport by linker phosphorylation.....	163
3. The cyclophilin A DIAGEOTROPICA gene affects auxin transport in both root and shoot to control lateral root formation.....	195
