Acknowledgements	v
Abstract	xiii
Zusammenfassung	xv
Publications	xvii
Selected Poster Presentations	xviii
Introductory Remarks	xviii
1 Introduction	1
1.1 Hypervalent Iodine Reagents	1
1.2 Fluorine, an Ubiquitous Element	4
1.3 Trifluoromethylation	6
2 Theoretical Background	9
2.1 Solvent Representation	9
2.1.1 Continuum Solvent Models	9
2.1.2 Combined Implicit and Explicit Approaches	11
2.2 Statistical Thermodynamics	12
2.2.1 Canonical Ensemble	12
2.2.2 Entropy	14
2.3 Classical Molecular Dynamics	16
2.3.1 Classical Mechanics	17
2.3.2 Molecular Dynamics	18
2.4 <i>ab initio</i> Molecular Dynamics	18
2.4.1 Metadynamics	21
2.4.2 Thermodynamic Integration	23

6 Pushing the Limits of Iodane Chemistry	153
6.1 Introduction	154
6.2 Computational Details	156
6.3 Results and Discussion	157
6.3.1 Evaluation of the 3c4e Bond	158
6.3.2 Reagent Design	168
6.3.3 Trifluormethylative Silacyclobutane Ring Opening	172
6.3.4 Double Bond Formation via Reductive Elimination	174
6.3.5 Reaction with Olefins and New Perspectives for Carbon Chain Extension	180
6.4 Conclusions	183
A Silyl Ketene Imines	185
7 Conclusions and Outlook	187
8 Epilogue	191
Bibliography	193
Curriculum Vitæ	205
