

# Table of Contents

1	<b>Introduction</b>	13
2	<b>Background</b>	15
2.1	Point-localization super-resolution microscopy (SMLM) and probe requirements	15
2.2	Common targeting strategies in fixed and living cells	17
2.3	Photoswitching mechanisms	18
	2.3.1 Photoswitchable fluorescent proteins	18
	2.3.2 Synthetic dyes in fixed cells	19
	2.3.3 Synthetic dyes in living cells	20
2.4	Metrics to describe resolution in SMLM	21
2.5	High density single molecule imaging and tracking	22
3	<b>Application of a novel labeling scheme for live-cell organellar super-resolution imaging</b>	24
3.1	Abstract	24
3.2	Live intracellular super-resolution imaging using site-specific stains	24
4	<b>A strategy to increase single molecule density for live-cell super-resolution imaging and tracking in living cells</b>	32
4.1	Abstract	32
4.2	Reduced dyes enhance single-molecule localization density for live super-resolution imaging	32
5	<b>Maintaining structural information in 3D super-resolution imaging</b>	42
5.1	Abstract	42
5.2	Correction of a depth-dependent lateral distortion in 3D super-resolution imaging	42
6	<b>From constriction to scission: studying mitochondrial fission events in living cells</b>	53
6.1	Abstract	53
6.2	Imaging mitochondrial fission events in living cells with high resolution	53
6.3	Toward a physical understanding of membrane shape transformation during mitochondrial fission	56
7	<b>Conclusion and Outlook</b>	60
7.1	Conclusion	60
7.2	Outlook	61
	7.2.1 Measuring mitochondrial fission times	61

7.2.2	Determining succession of fission for the mitochondrial inner and outer membranes	62
7.3	Final remarks	64
8	<b>Materials and Methods</b>	65
8.1	Live intracellular super-resolution imaging using site-specific stains	65
8.2	Reduced dyes enhance single-molecule localization density for live-cell super-resolution imaging	66
8.3	Correction of a depth-dependent lateral distortion in 3D super-resolution imaging	67
8.4	Imaging mitochondrial fission in living cells with high resolution	70
8.5	Toward a physical understanding of membrane shape transformation during mitochondrial fission	71
<b>Appendix A: Live intracellular super-resolution imaging using site specific stains</b>		73
<b>Appendix B: Resolution in live, organellar super-resolution imaging</b>		85
<b>Appendix C: Validation of high-density single molecule fitting algorithms</b>		88
<b>Appendix D: From constriction to scission</b>		92
<b>References</b>		94
<b>Acknowledgments</b>		105
