

TABLE OF CONTENTS

SUMMARY	4
ZUSAMMENFASSUNG	5
ABBREVIATIONS	11
INTRODUCTION	13
CANCER & CANCER THERAPY	13
CELL CYCLE	14
Cell cycle regulation	14
REPLICATION	15
PCNA	16
Replication factor C complexes	17
ATAD5-RLC & ELG1-RLC	18
Replication stress	20
GENOME INTEGRITY	22
DNA damage	22
DNA damage response	22
ATM and ATR	22
CHK1 and CHK2	23
Cell cycle arrest	24
DNA repair	25
Base Excision Repair	26
Single-Strand Break Repair	28
Double-Strand Break Repair	29
Homologous Recombination	30
Single strand annealing	31
Non-Homologous End Joining	31
Pathway choice	32
Repair of one-ended DSBs	33
DNA damage bypass	33
Stabilization of replication forks	33
Replication fork restart	34
CANCER CELL METABOLISM	35
Oxidative stress and disease	36
Antioxidants	37
Oxidative DNA damage	38

8-oxoguanine	39
Damage prevention and base excision repair of 8-oxoguanine	39
OGG1	40
MYH	41
MTH1	41
Other Nudix hydrolase family members	43
<i>ADP-RIBOSE METABOLISM</i>	44
ADP-Ribosylation (writers)	44
NAD ⁺ metabolism	45
Interactions with ADP-Ribose (readers)	45
ADP-Ribosylhydrolases (erasers)	45
PARP1	46
PARP1 in base-excision repair	47
PARP1 in double-strand break repair	48
<i>PARP1 INHIBITION AND SYNTHETIC LETHALITY</i>	49
PARP1 inhibitors in the clinic	50
PARP inhibitor resistance	50
AIMS	52
RESULTS I	53
RESULTS II	69
DISCUSSION	87
<i>CANCER & DNA REPAIR</i>	87
Oxidative DNA damage repair initiated by MYH contributes to PARP inhibitor sensitivity in HR-deficient cells	88
The role of ATAD5 in genome maintenance	93
<i>CONCLUDING REMARKS & FUTURE PERSPECTIVES</i>	97
REFERENCES	99
CURRICULUM VITAE	118
