Abstract	1
Abbreviations	2
1. Introduction	4
1.1 Background & Thesis aim	4
1.2 NMR theory	8
1.2.1 Basic principles	8
1.2.2 High-Resolution Magic Angle Spinning (HR-MAS) NMR and metabolical analysis	11
1.2.3 Ex vivo NMR sequences	13
1.3 In vivo MR basics and sequences	19
1.3.1. Dixon Fat/Water imaging	20
1.3.2. Single voxel spectroscopy	22
1.3.3 Conventional chemical shift imaging	24
1.3.4 Fast CSI sequence - Echoplanar spectroscopic imaging	26
2. Ex vivo NMR results	29
2.1 Sequence optimization and measurement considerations	30
2.1.1 Separation of small metabolites and lipids in spectra from biopsies by diffusion-weighted HR-MAS NMR: a feasibility study	31
2.1.2 Sequence comparison between PROJECT and CPMG	52
2.1.3 Visibility of lipid resonances in HR-MAS spectra of brain biopsies subject to spinning rate variation	58
2.1.4 Visibility of lipid resonances in HR-MAS spectra of different organ biopsies subject to spinning rate variation	60
2.1.5 Direct determination of phosphate sugars in biological material by ¹ H HR-MAS NMR spectroscopy	79
2.2 Optimized protocol establishment	89
2.2.1 Biopsy protocol	90
2.2.2 Ex vivo HR-NMR of urine and plasma	95
2.2.3 ¹ H HR-MAS NMR of renal biopsies - Difference between renal cortex and medulla	98

2.3 Chemometric analysis	103
2.3.1 Is the metabolite profile of a single muscle biopsy representative for the tissue under investigation? A reproducibility study using HR-MAS	104
2.3.2 Investigation of glucose-phosphates in skeletal muscle biopsies by ^1H HR-MAS NMR: Comparison between active and sedentary subjects	108
2.3.3 Metabolic fingerprinting of healthy fibroblasts by ^1H HR-MAS NMR spectroscopy and separation of defect and healthy fibroblasts	113
2.3.4 Investigation of cell culture media derived from cells infected or not with hepatitis C virus by NMR spectroscopy	117
2.3.5 ^1H HR-MAS NMR based metabolic profiling of cells in response to treatment with a hexacationic ruthenium metallaprism as potential anticancer drug	122
3. <i>In vivo</i> MR results	123
3.1 <i>Fat quantification in back muscles with low lipid content: A comparison of SVS, CSI and Dixon measurements</i>	124
3.2 <i>Fat assessment in shoulder muscle: A comparison between spectroscopic and imaging techniques.</i>	129
3.3 <i>Are renal lipids increased in overweight diabetic patients? A MR spectroscopy and Dixon Fat/Water imaging study</i>	134
3.4 <i>Alternatives for fat-water imaging : EPSI</i>	153
3.5 <i>Renal metabolite detection - Initial spatially resolved spectroscopy results.</i>	157
4. Conclusion	163
Acknowledgements	167
Curriculum Vitae	168
Publications	169
5. Appendices	173
