Abstract	1
Introduction	3
General features of <i>Listeria monocytogenes</i>	5
From saprophyte to pathogen	6
Virulence factors involved in the extra- to intracellular transition	9
<i>Listeria monocytogenes</i> genetic diversity	11
Hypothesis and aims	15
Results	19
Outbreak investigation identifies a single <i>Listeria monocytogenes</i> strains in sheep with different clinical manifestations, soil and water	21
<i>Listeria monocytogenes</i> sequence type 1 is predominant in ruminant rhombencephalitis	31
Diversity of ruminant-associated <i>Listeria monocytogenes</i> in disease and the environment	67
Diverging extra- and intracellular fitness of <i>Listeria monocytogenes</i> sequence types	95
Discussion	133
Outlook	139
