CONTENTS	1
ABSTRACT	2
ZUSAMMENFASSUNG	3
INTRODUCTION	4
<i>LISTERIA MONOCYTOGENES</i>	4
THE POSITIVE REGULATORY FACTOR A (PrfA)	5
GENE EXPRESSION AT THE SINGLE CELL LEVEL	7
HYPOTHESIS	8
MATERIALS AND METHODS	9
BACTERIAL STRAINS AND GROWTH CONDITIONS	9
FLUORESCENCE-ACTIVATED CELL SORTING	11
CaCo-2 CELL INVASION ASSAY	12
PrfA+/- PASSAGES	13
HEMOLYSIS ASSAY	14
GENOME SEQUENCING AND ANALYSIS	14
STATISTICAL ANALYSIS	16
RESULTS	17
A STABLE FLUORESCENT PHENOTYPE OCCURS IN SORTED PrfA+ AND - CELLS OVER SIX PASSAGES.	17
P6+ STRAINS SHOW NO INCREASED HEMOLYSIS OF HUMAN ERYTHROCYTES OR INCREASED INVASION IN CaCo-2 CELLS.	20
PrfA+ AND PrfA- INDUCED AND SORTED <i>LISTERIA</i> CELLS OF PARENT STRAIN 10403S SHOW NO DIFFERENCE IN HOST CELL INVASIVENESS	22
GENOME SEQUENCING AND ANALYSIS	23
DISCUSSION	25
