Acknowledgements	i
Abstract	iii
Résumé	v
List of abbreviations	vii
Contents	ix
Chapter 1 Introduction	1
Chapter 2 Materials and methods	7
2.1 Synthesis of IONPs	7
2.2 Coating of IONPs	8
2.3 Physico-chemical characterization of IONPs	9
2.4 Biological <i>in vitro</i> characterization of IONPs	13
2.5 IONPs and protein corona	16
2.6 References	20
Chapter 3 Synthesis and characterization	23
3.1 Optimisation of aqueous synthesis of IONPs for biomedical applications	26
3.2 Controlling the structural and magnetic properties of IONPs by aqueous synthesis for improved hyperthermia	40
3.3 Tuning properties of iron oxide nanoparticles in aqueous synthesis without ligands to improve MRI relaxivity and SAR	55
3.4 Assessment of nanoparticles' safety : corrected absorbance-based toxicity test	69
Chapter 4 Coating of IONPs and their potential for lymph node metastases targeting	77
4.1 Chelating agents as coating molecules for iron oxide nanoparticles	79
4.2 Versatility of pyridoxal phosphate as a coating of iron oxide nanoparticles	92

4.3 ATP and NADPH coated iron oxide nanoparticles for targeting of highly metabolic tumor cells	107
4.4 Folic acid on IONPs : platform with high potential for simultaneous targeting, MRI detection and hyperthermia treatment of lymph node metastases of prostate cancer	120
4.5 Summary and conclusion	133
Chapter 5 Protein corona from blood vs lymph: isolation and characterization	137
5.1 Methods of protein corona isolation for magnetic nanoparticles	139
5.2 Protein corona : impact of lymph vs blood in a complex <i>in vitro</i> environment	153
Chapter 6 Conclusion	169
6.1 Achieved results	169
6.2 Future development	170
Chapter 7 Annexes	173
7.1 Controlling the structural and magnetic properties of IONPs by aqueous synthesis for improved hyperthermia	173
7.2 Tuning properties of iron oxide nanoparticles in aqueous synthesis without ligands for superior MRI relaxivity and specific absorption rate	179
7.3 Assessment of nanoparticles' safety : corrected absorbance-based toxicity test	189
7.4 Chelating agents as coating molecules for iron oxide nanoparticles	192
7.5 Versatility of pyridoxal phosphate as a coating of iron oxide nanoparticles	195
7.6 ATP and NADPH coated iron oxide nanoparticles for targeting of highly metabolic tumor cells	201
7.7 Folic acid on IONPs : platform with high potential for simultaneous targeting, MRI detection and hyperthermia treatment of lymph node metastases of prostate cancer	209
7.8 Methods of protein corona isolation for magnetic nanoparticles	216
7.9 Protein corona : impact of lymph vs blood in a complex <i>in vitro</i> environment	220
Curriculum Vitae	229
